QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,
AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 149.] **Marriages**—October, November, December, 1885. [Price 9d.
Births and Deaths—January, February, March, 1886.

General Register Office, Somerset House,
30th April, 1886.

The POPULATION of the UNITED KINGDOM in the middle of 1886 is estimated at 36,707,418 persons; that of England and Wales at 27,870,586, of Scotland at 3,949,393, and of Ireland at 4,887,439.

In the United Kingdom the *births* of 292,247 children, and the *deaths* of 204,438 persons, were registered in the three months ending 31st March 1886. The natural increase of population was, therefore, 87,809. The registered number of persons married in the quarter ending 31st December 1885 was 137,082.

The birth-rate in the United Kingdom in the first quarter of 1886 was 32·3 and the death-rate 22·6 per 1000. The marriage-rate in the fourth quarter of 1885 was 15·0 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered in the 2143 registration sub-districts of England and Wales during the quarter ending 31st March 1886; and the MARRIAGES in 14,783 churches or chapels, in 9593 registered places of worship unconnected with the Established Church, and in 632 Superintendent Registrars' Offices, in the three months ending 31st December 1885.

Marriages.

During the three months ending with December last, the marriages of 114,090 persons were registered in England and Wales, corresponding to an annual rate of 16·5 per 1000 of the estimated population in the middle of 1885. This marriage-rate was 1·8 below the mean rate in the corresponding quarters of the ten years 1875-84, and was lower than the rate recorded in the fourth quarter of any year since civil registration was established in 1837. The nearest approach

to so low a marriage-rate on record in the fourth quarter of any year was 17·0 in 1879. The lowest rates in the fourth quarter of last year were 11·9 in Shropshire, 12·1 in Herefordshire, 12·2 in Lincolnshire, and 12·9 in Hertfordshire. The rates in the other registration counties ranged upwards to 19·0 in the East Riding, 19·3 in Cambridgeshire, 20·2 in Suffolk, and 20·7 in Norfolk.

The marriage-rate for the year 1885 was equal to 14·4 per 1000; it was lower than the rate in any previous year since 1879, when the same rate was recorded, and was, 1·0 below the mean annual rate in the ten years 1875-84. A lower marriage-rate than that recorded in 1879 and in 1885, has not occurred in any year since the commencement of civil registration in 1837.

Births.

The births registered in England and Wales during the three months ending with March last were 230,671, corresponding to an annual rate of 33·6 per 1000 of the estimated population. This birth-rate was 1·8 below the average rate in the corresponding quarters of the ten years 1876-85, and was with the exception of the rate in 1884 (33·2) lower than that recorded in the first quarter of any year since 1850. The rate did not exceed 25·0 in Rutlandshire, 25·7 in North Wales, 29·0 in Herefordshire, and 29·1 in Sussex and in Shropshire; whereas it ranged upwards to 37·7 in Staffordshire, 38·4 in Essex and in Nottinghamshire, and 40·6 in Monmouthshire.

In the twenty-eight great towns the births registered last quarter corresponded to an annual rate of 34·7 per 1000, and exceeded the general English rate by 1·1. The rate was 34·3 in London, and 35·0 in the twenty-seven provincial towns, among which it ranged from 25·9 in Brighton and in Huddersfield, 28·7 in Halifax, and 29·4 in Bradford, to 40·6 in Newcastle-upon-Tyne, 40·7 in Preston, and 44·6 in Cardiff. In fifty other large town districts the mean birth-rate was 34·7, and corresponded with the rate in the great towns. The lowest rates among these fifty towns were 23·4 in Hastings, 24·2 in Southport, 24·3 in Bath, and 24·8 in Cambridge; the highest rates were 42·3 in Walsall, 44·4 in St. Helens, 44·6 in Ystradyfodwg, and 47·8 in Newport (Mon.).

Movement of the Population.

The natural increase of the population of England and Wales, or the excess of births over deaths, which had been 92,539 and 84,104 in the first quarters of 1884 and 1885, further declined to 73,763 in the three months ending March last. It appears from returns issued by the Board of Trade that 42,030 emigrants embarked during last quarter from the various ports of the United Kingdom at which emigration officers are stationed. Distributing 514 whose nationality was undistinguished, and excluding 10,928 foreigners, the emigrants of British origin were 31,102, including 21,549 English, 3460 Scotch, and 6093 Irish. The numbers of British emigrants in the three preceding corresponding quarters were 43,611, 37,829, and 30,748, respectively. The proportions of emigrants last quarter to a million of the population in the three divisions of the United Kingdom were 773 from England, 876 from Scotland, and 1247 from Ireland. Compared with the corresponding quarter for 1885 the proportion of emigration last quarter showed a slight increase in England and in Scotland, whereas in Ireland it was lower than in the first quarter of any year since 1879.

Prices and Pauperism.

The average price of wheat during the three months ending with March last was 29s. 9d., and showed a further decrease of 1s. from the declining mean prices in the last three quarters of 1885. The mean wholesale prices of beef and of mutton were 4 $\frac{7}{8}$ d. and 5 $\frac{5}{8}$ d. per lb. respectively; the mean price of beef showed a further decline of $\frac{2}{8}$ d. from the mean prices in recent quarters, while that of mutton showed an increase of $\frac{3}{8}$ d. upon the price in the preceding quarter. The average price of the best sea-borne coal in the London market, put in barge from the collier in the Thames, was 15s. 9d. per ton, corresponding with the mean price in the first quarter of 1885. The mean price of Consols was 100 $\frac{4}{8}$ l. The minimum annual rate of discount charged at the Bank of England, which had been raised to 4 per cent., on 17th December was reduced to 3 per cent. on 21st January, and to 2 per cent. on 18th February; the average rate during the quarter was 2·75 per cent.

The average number of paupers (exclusive of lunatics in asylums, and vagrants) relieved in England and Wales on the last day of each week in the quarter was 773,657, of whom 194,033 received in-door and 579,624 out-door relief. The proportion of the population in receipt of pauper relief during the three months ending with March last was 27·8 per 1000, against 26·7 and 26·8 in the two preceding corresponding quarters.

Meteorology.

The remarks upon the Meteorology of the quarter at the Royal Observatory, Greenwich, and at the various stations of observation, furnished by Mr. James Glaisher, F.R.S., with accompanying Tables, will be found on pages 65-72. The mean reading of the barometer at Greenwich was 29·737 inches, and was 0·027 above the mean reading for the corresponding periods of 45 years; the mean reading was below the average in January, while it showed an excess in February and March. The mean temperature of the air during the quarter was 36°·5, and was 2°·3 below the average for the corresponding periods of 115 years. The weather after the first few days of January until the middle of March, was generally cold and dull, with little sunshine; on the 19th March, however, there was a sudden change to warm weather, which continued until the end of the quarter. The mean temperature in January was 0°·4, in February 5°·0, and in March 1°·5, below the average. At 36 stations of observation the mean temperature during the quarter ranged from 34°·1 at Halifax, 34°·3 at Wolverhampton, and 34°·8 at Burslem, to 40°·0 at Barnstaple, 40°·6 at Truro, and 40°·7 at Guernsey.

The amount of rain measured at Greenwich during the quarter was 5·36 inches, and was 0·14 of an inch above the average amount in the corresponding periods of 45 years. The rainfall was above the average in January, and below the average both in February and in March. Rain was measured at Greenwich on 22 days in January, 10 in February, and 15 in March, or on 47 of the 90 days in the quarter. The rainfall recorded at 35 stations of observation ranged from 3·93 inches at Lowestoft, 3·96 inches at Somerleyton, and 4·01 inches at Cardington, to 10·45 inches at Barnstaple, 11·60 inches at Torquay, 11·65 inches at Truro, and 11·99 inches at Stonyhurst.

The number of hours of bright sunshine recorded during the quarter at the Royal Observatory, Greenwich, was 135·6, against 201·4, 148·7, and 160·2 in the corresponding periods of 1883, 1884, and 1885.

State of the Public Health ; Deaths.

During the three months ending with March last 156,908 deaths were registered in England and Wales, corresponding to an annual rate of 22·8 per 1000 of the estimated population. This death-rate was 0·6 above the average rate in the corresponding quarters of the ten years 1876-85, and was higher than the rate recorded in the first quarter of any year since 1879. The lowest county rates were 16·8 in Westmorland, 18·1 in the North Riding, 19·2 in Lincolnshire, and 19·4 in the East Riding and in Rutlandshire; while the highest rates were 25·9 in Devonshire, 26·6 in South Wales, 27·6 in Huntingdonshire, and 28·4 in Monmouthshire.

The 156,908 deaths last quarter included 79,651 of males, and 77,257 of females. The annual death-rate among males was 23·8, and among females 21·9 per 1000 estimated to be living of each sex. In equal numbers living the deaths of males were 109 to 100 females, corresponding with the proportion that prevailed in the first quarter of 1885.

URBAN AND RURAL MORTALITY.—In the registration districts and sub-districts comprising the chief towns (see Table III.) and containing an estimated population of nearly seventeen millions, the death-rate was 23·6 per 1000; in the remaining and chiefly rural population of nearly eleven millions of persons, the rate was 21·6. These urban and rural rates were respectively 0·1 and 1·1 above the average rates in the ten preceding corresponding quarters. In equal numbers living, the deaths were 109 in the urban to 100 in the rural population, whereas the average proportion in the first quarters of the ten years 1876-85 was 115 to 100.

In the twenty-eight great English towns, including London, and having an estimated population of rather more than nine millions of persons, the registered deaths corresponded to an annual rate of 24·4 per 1000, and was 0·8 above the general urban rate. The death-rate was 24·9 in London and averaged 24·0 in the twenty-seven provincial towns, among which it ranged from 19·4 in Hull, 19·7 in Leicester, 21·0 in Bradford, and 21·1 in Sheffield, to 28·4 in Preston, 29·2 in Plymouth, 29·5 in Manchester, and 30·9 in Blackburn.

In fifty other large town districts, with an aggregate population estimated at nearly three millions of persons, the registered deaths corresponded to an annual rate of 23·3 per 1000, which was 0·5 above the general English rate, and 1·1 below the rate in the twenty-eight larger towns. The lowest rates among these fifty towns were 14·2 in Rotherham, 15·4 in Accrington, 16·7 in Southport, and 17·4 in Gloucester; and the rates in the other towns ranged upwards to 30·5 in Colchester, 31·4 in Exeter, 31·5 in Shrewsbury, 34·9 in Merthyr-Tydfil, and 35·2 Ystradfydwg.

MORTALITY AT DIFFERENT AGES.—The deaths last quarter included 34,495 of infants under one year of age, 72,872 of children and adults aged between one and 60 years, and 49,541 of persons aged upwards of 60 years.

Infant mortality, or the proportion of deaths under one year to registered births, was 150 per 1000; in the ten preceding corresponding quarters it averaged 144 and ranged from 152 in 1880 to 134 in 1884. The lowest county rates last quarter were 103 in Westmorland, 119 in Lincolnshire, and 123 in Sussex and in Northumberland; while the highest were 179 in Nottinghamshire, 183 in Shropshire, 190 in Monmouthshire, and 208 in South Wales.

In the twenty-eight great towns the deaths of infants were in the proportion of 154 to 1000 registered births, and 4 above the general English rate. The rate was 149 in London and 159 in the twenty-seven provincial towns, among which

it ranged from 129 in Sunderland, 133 in Bristol, and 134 in Brighton, to 185 in Bolton, 196 in Nottingham, and 227 in Blackburn.

In fifty other large town districts the rate was 161 per 1000 registered births; the proportion was only 100 in Dover and in Southport, 101 in Gloucester, and 103 in Chester and in Accrington, while it ranged upwards to 234 in Exeter, 235 in Shrewsbury, 251 in Swansea, 260 in Merthyr-Tydfil, and 266 in Ystradyfodwg.

Among persons aged between one and 60 years the deaths corresponded to an annual rate of 11·8 per 1000, against an average of 12·2 in the ten preceding first quarters. In the twenty-eight great towns the deaths at these ages corresponded to an annual rate of 13·9, ranging from 10·1 in Norwich, 10·5 in Hull, and 10·9 in Derby, to 16·7 in Liverpool, 17·0 in Blackburn, 17·3 in Manchester, and 17·4 in Plymouth.

The deaths among persons aged upwards of 60 years were equal to an annual rate of 97·7 per 1000, which exceeded by 14·2 the mean rate in the ten preceding first quarters, in which the rates at this group of ages ranged from 102·9 in 1879, to 71·4 in 1884. The death-rate at this age-period in the twenty-eight towns last quarter was 108·7, and exceeded the general English rate by 11·0. In London the rate was 111·5, while in the twenty-seven provincial towns it averaged 106·1, and ranged from 82·4 in Nottingham, 82·6 in Hull, and 88·0 in Newcastle-upon-Tyne, to 126·8 in Preston, 129·0 in Halifax, 139·3 in Blackburn, and 143·6 in Manchester.

During last quarter the death-rate of infants was 4·2 per cent., and of persons aged upwards of 60 years was 17·0 per cent., above the mean rates in the ten preceding corresponding quarters, whereas the rate among children and adults aged between one and 60 years was 3·3 per cent. below the mean rate in those quarters.

ZYMOTIC DISEASES.—The 156,908 deaths from all causes included—

4890 attributed to whooping-cough,

3255 ,, measles,

1473 ,, diarrhoea,

1246 ,, scarlet fever.

1232 ,, fever,

1047 ,, diphtheria,

147 ,, small-pox.

Thus the total number of deaths ascribed to these seven causes was 13,290, and corresponded to an annual death-rate of 1·93 per 1000, against an average rate of 2·34 in the ten preceding first quarters. The mortality from scarlet fever, fever, and small-pox and diarrhoea was considerably below the average, while that from whooping-cough, measles, and diphtheria somewhat exceeded the average. The lowest rates from these causes were 0·35 in Rutlandshire, 0·62 in Wiltshire, and 0·73 in the East Riding; the highest rates were 2·60 in Devonshire, 2·63 in South Wales, 2·76 in Essex, and 3·20 in Huntingdonshire.

The rate in the aggregate of the twenty-eight great towns was 2·33, and ranged from 0·61 in Halifax, 0·90 in Hull, and 1·00 in Wolverhampton, to 3·93 in Bolton, 3·95 in Portsmouth, 4·19 in Plymouth, and 6·33 in Blackburn. In fifty other considerable towns the rate averaged 1·94, and ranged upwards to 6·15 in Shrewsbury, 6·36 in Barrow-in-Furness, and 6·76 in Exeter. In the remainder of England and Wales the zymotic rate was only 1·70.

The deaths from *whooping-cough* numbered 4890, and corresponded to an annual rate of 0·71 per 1000, against an average rate of 0·61 in the ten preceding first quarters.

No death from this disease was registered in Rutlandshire, and its mortality was under 0·20 in Wiltshire and Westmorland, while it was 1·01 in Hampshire 1·06 in Middlesex (extra-met), 1·12 in Sussex, and 1·93 in Essex.

In the twenty-eight great towns the rate was 1·00, and ranged from 0·05 in Bradford, 0·10 in Wolverhampton, and 0·20 in Preston and in Halifax, to 1·41 in Brighton, 1·50 in London, 1·88 in Bolton, and 2·15 in Portsmouth. In fifty other considerable towns the mean rate was 0·61; the highest rates were 1·43 in Bath, 1·79 in Dudley, 1·85 in Swansea, 2·20 in Colchester, and 4·64 in Shrewsbury. In the remainder of England and Wales the rate was 0·56, and showed a marked excess in the sub-districts of Gravesend, Ramsgate, North Horsham, Worthing, Romsey, Burnham, Orsett, Colchester Second Ward, Sudbury, Tipton, Wilford, Llanelly, and Pembrey.

The deaths from *measles* numbered 3255, and corresponded to an annual rate of 0·47 per 1000, against an average rate of 0·38 in the ten preceding first quarters.

No death from this disease was registered in Wiltshire, and the mortality was under 0·10 in Dorsetshire, Oxfordshire, Norfolk, East Riding, Gloucestershire, Lincolnshire, Suffolk, and North Wales; it was 1·09 in Nottinghamshire, 1·13 in Warwickshire, 1·33 in Monmouthshire, 1·51 in Devonshire, and 1·92 in Huntingdonshire.

In the twenty-eight great towns the mean rate was 0·56, but while the rate was 0·00 in Norwich, Wolverhampton, Huddersfield, Halifax, and Sunderland, it ranged upwards to 1·34 in Bolton, 2·12 in Nottingham, 3·25 in Plymouth, and 4·23 in Blackburn. In fifty other considerable towns the mean rate was 0·63, the highest rates being 1·65 in Ashton-under-Lyne, 1·92 in Ystradyfodwg, 1·98 in Macclesfield, 5·65 in Barrow-in-Furness, and 5·92 in Exeter. In the remainder of England and Wales the rate was only 0·40, but showed a marked excess in the sub-districts of North Horsham, Newport (Isle of Wight), Berkhamstead, Ramsey, Linton, North Tawton, Cheriton-Fitzpaine, Stourbridge, Erdington, Pemberton, Ulverston, Blaenavon, Gelligaer, and Llanelly.

The deaths attributed to *diarrhœa* and *dysentery* numbered 1473, and corresponded to an annual rate of 0·22 per 1000, against an average rate of 0·26 in the ten preceding first quarters.

The rates in the counties ranged from 0·00 in Rutlandshire, and 0·05 in Bedfordshire, to 0·36 in Staffordshire and Cumberland, 0·40 in Shropshire, and 0·46 in Herefordshire.

The rate in the twenty-eight great towns was 0·21, but was so high as 0·59 in Preston, 0·60 in Bolton, and 1·06 in Blackburn. In fifty other considerable towns the rate was 0·24, and slightly higher than in the twenty-eight great towns, while in the remainder of England and Wales it was 0·20.

The deaths from *scarlet-fever* numbered 1246, and corresponded to an annual rate of 0·18 per 1000, which was no less than 0·37 below the average rate in the ten preceding first quarters.

No death from this disease was registered in Dorsetshire, Westmorland, or Rutlandshire, while the highest rates were 0·35 in West Riding, 0·46 in Leicestershire, and 0·66 in Durham.

In the twenty-eight great towns the rate was 0·18; it was only 0·03 in Brighton, and 0·04 in Bristol, in Nottingham, and in Bolton, while it ranged upwards to 0·60 in Leicester, 0·75 in Leeds, and 0·80 in Birkenhead. In fifty other considerable towns the rate averaged 0·20, and was equal to 0·56 in Yarmouth and in Lincoln, and to 1·03 in South Shields. In the remainder of England and

Wales the rate was 0·18; it showed, however, notable excess in the sub-districts of Bridgwater, Atherton, Easington, and Gelligaer.

The deaths from *fever*, including typhus, enteric fever, and simple and ill-defined forms of continued fever, numbered 1232, and corresponded to an annual rate of 0·18 per 1000, against an average rate of 0·31 in the ten preceding first quarters.

The rate was under 0·07 per 1000 in Suffolk, Herefordshire, Gloucestershire, and Leicestershire, while it was 0·25 in Northumberland, 0·27 in Lancashire, 0·30 in Durham, and 0·33 in South Wales.

In the twenty-eight great towns the rate was 0·19 per 1000, ranging from 0·03 in Leicester, 0·05 in Bristol, and 0·07 in Bolton, to 0·42 in Manchester and in Blackburn, and 0·44 in Norwich and in Preston. In fifty other considerable towns the rate averaged 0·17, rising, however, to 0·51 in Stockport, and 0·54 in Ystradlyfodwg. In the remainder of England and Wales the rate was 0·17, showing, however, an excess in the sub-districts of St. Peter (Maldon) and Hartlepool.

The deaths ascribed to *diphtheria* numbered 1047, and corresponded to an annual rate of 0·15 per 1000, against an average rate of 0·14 in the ten preceding first quarters.

No death from this disease was registered in Rutlandshire and only one in Herefordshire; while the highest rates were 0·35 in Hertfordshire, 0·41 in Middlesex (extra-met.), and 0·52 in Buckinghamshire. In the twenty-eight great towns the rate was 0·17, the highest rates being 0·30 in Wolverhampton, 0·33 in Bristol, and 0·35 in Portsmouth. In fifty other considerable towns the rate averaged 0·08, while in the remainder of England and Wales it was 0·16, showing, however, considerable excess in the sub-districts of Folkstone, Petersfield, Aylesbury, Stowmarket, Castle Rising, Ashburton, and South Molton.

The deaths from *small-pox* numbered 147, and were fewer than in any quarter since the third of 1880; they corresponded to an annual rate of 0·02 per 1000, against an average of 0·10 in the ten preceding first quarters.

Of the 147 deaths, 19 belonged to Greater London, 35 occurred in the more or less adjacent counties of the South-eastern division, 40 in Cheshire and Lancashire, 17 in Durham (including 11 in Hartlepool), and 46 in other parts of England and Wales.

The following Table shows the relative mortality from each of the above-mentioned zymotic diseases in the twenty-eight great towns, in the fifty other considerable urban districts, and in the remainder of the country:—

ANNUAL DEATH-RATE per 1,000 from several ZYMOTIC DISEASES during the First Quarter of 1886.

	From Diseases in Cols. 2-8.	Small- pox.	Measles.	Scarlet Fever.	Diph- theria.	Whoop- ing- cough.	Fever.	Diar- rhoea.
Cols.	1.	2.	3.	4.	5.	6.	7.	8.
England and Wales -	1·93	0·02	0·47	0·18	0·15	0·71	0·18	0·22

CERTIFICATION OF CAUSES OF DEATH.—The causes of 143,219, or 91·3 per cent., of the 156,908 deaths in England and Wales were certified by registered medical practitioners in attendance during the last illness, and 8049, or 5·1 per cent., by coroners in inquest cases. The causes of the remaining 5640, or 3·6 per cent., of the deaths were uncertified. The proportion of uncertified deaths did not exceed 1·2 per cent. in London, whereas it was 4·1 per cent. in the rest of England and Wales. The per-centage of uncertified deaths was 0·6 in the extra-metropolitan portion of Middlesex, 1·8 in the extra-metropolitan portion of Surrey and in Hampshire, and 1·9 in Buckinghamshire and in Wiltshire, while it ranged upwards to 6·0 in Dorsetshire and in Cornwall, 6·1 in Huntingdonshire, 6·6 in Herefordshire, and 7·9 in Westmorland. In Wales 8·4 per cent. of the causes of death were uncertified, the proportions being 8·8 in North Wales and 8·2 in South Wales.

In the twenty-eight great towns the proportion of uncertified deaths was 2·4 per cent.; but while it did not exceed 1·2 in London, it averaged 3·4 in the twenty-seven provincial towns. The per-centages in these provincial towns ranged from 0·9 in Portsmouth and in Plymouth, and 1·0 in Derby and in Birkenhead, to 5·6 in Liverpool and in Sheffield, 6·9 in Oldham, and 7·1 in Halifax.

VIOLENT DEATHS.—The deaths referred last quarter to different forms of violence were 4237; they corresponded to an annual rate of 0·62 per 1000 of the estimated population, and were equal to 2·7 per cent. of the total deaths. The death-rates from violence ranged from 0·34 in Shropshire, 0·37 in Bedfordshire, 0·38 in Cornwall, and 0·41 in Sussex and in North Wales, to 0·81 in Nottinghamshire, 0·84 in Warwickshire, 0·89 in Monmouthshire, and 1·11 in South Wales.

In the twenty-eight great towns the deaths from violence corresponded to an annual rate of 0·73 per 1000; the rates in the several towns ranged from 0·32 in Preston, 0·36 in Bolton, 0·37 in Plymouth, and 0·40 in Sheffield, to 0·82 in Sunderland, 0·87 in Nottingham, 0·97 in Liverpool, 1·04 in Birmingham, and 1·35 in Cardiff.

INQUESTS.—During last quarter 8049 inquest cases were registered; they were in the proportion of 5·1 per cent. to the total deaths, which corresponded with the average proportion in the ten preceding first quarters. In the twenty-eight great towns the proportion of inquests to deaths was 6·5 per cent.; it ranged from 2·3 in Blackburn, 2·8 in Oldham, and 3·2 in Brighton and in Sheffield, to 10·3 in Cardiff, 11·0 in Leicester, and 11·2 in Birmingham.

DEATHS IN PUBLIC INSTITUTIONS.—The deaths registered last quarter in workhouses, hospitals, and public lunatic asylums numbered 17,509, or 11·2 per cent. of the total deaths; this proportion exceeded by 0·9 per cent. the mean percentage in the first quarter of the ten years 1876-85. In the corresponding periods of 1884 and 1885 the per-centages of deaths in public institutions were 10·5 and 10·9 respectively. In the twenty-eight great towns 9217, or 16·7 per cent. of the deaths last quarter were recorded in the principal public institutions, against 16·8 in the first quarter of 1885; the proportions of institution deaths in these towns ranged from 6·5 in Plymouth, 8·0 in Bolton, 8·4 in Nottingham, and 9·4 in Bradford, to 17·6 in Bristol, 17·9 in Liverpool, 19·6 in Manchester, and 20·3 in London.

HEALTH OF FOREIGN AND COLONIAL CITIES.

A summary of the Weekly Returns, with which the Registrar-General is favoured by various local authorities abroad, shows that the average annual death-rate during the quarter ending March last in thirty-one Colonial and Foreign cities, having an aggregate population of nearly fifteen and a half millions of persons, was equal to 28·0 per 1000. In the twenty-two European cities the average rate was 29·0 per 1000, against 24·4 in twenty-eight large English towns. Among the thirty-one Colonial and Foreign cities the lowest death-rates were 19·2 in Baltimore, 20·8 in Copenhagen, 22·2 in Philadelphia and in Christiania, and 22·6 in Brooklyn; in the other towns the rates ranged upwards to 36·8 in Buda-Pesth, 38·9 in Madras, 39·8 in Alexandria, and 47·1 in Cairo. The rate of mortality in Paris was equal to 28·6 per 1000, and exceeded that recorded in the corresponding quarter of either of the two preceding years; the fatal cases of each of the principal zymotic diseases, except fever, showed an increase upon those returned in the preceding quarter. The deaths referred to small-pox in Vienna, which had been 171 and 202 in the last two quarters of 1885, declined during the first three months of this year to 114; 206 fatal cases of this disease occurred in Buda-Pesth, 119 in Rome, 95 in Paris, 59 in Prague, and 46 in Venice. Measles caused 303 deaths in Rome, 257 in St. Petersburg, 247 in Paris, and 226 in Buda-Pesth. The prevalence of scarlet fever showed a decline in most of the German and Austrian cities, while in St. Petersburg, New York, and Brooklyn there was a marked increase. Diphtheria and croup showed increased fatality in Paris, St. Petersburg, Rome, Turin, New York, and Brooklyn. The deaths referred to typhoid fever in Paris, which had been 405 and 377 in the last two quarters of 1885, declined during the first three months of this year to 201, which were, however, equal to an annual rate of 0·36 per 1000, while the rate from this disease in London last quarter did not exceed 0·12 per 1000. Fever fatality showed an increase in Brussels, St. Petersburg, and Buda-Pesth.

PRELIMINARY TABLES.

* Furnished by the Chief Cashier of the Bank of England.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which the best seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns with which the Registrar-General has been favoured by Mr. Richard Meade of the Mineral Statistics Department, Home Office.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Imp† D. signifies an Improvement District, and L. G. D. a Local Government District.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situated outside that area.

† The rate of increase of population in Barrow-in-Furness and in Ystradgwydyd was so abnormally large between 1871 and 1881 as to preclude the probability of the rate being maintained between 1881 and 1891. The present population of these towns has therefore been estimated from special returns of inhabited houses with which the Registrar-General has been favoured by the local authorities.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1881 has been the same as that which prevailed between 1871 and 1881; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London, and the estimates for its component districts have been adjusted to cast to the estimated total. In calculating the rates of mortality, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring; a similar correction has been made for the deaths registered in the Surrey County Lunatic Asylum situated in the District of Croydon.

TABLE IX.—**Births and Deaths in the First Quarter of 1886, in 31 Foreign Cities, having an estimated aggregate Population of 15,467,821 persons.**

* The Registration or Union Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

b The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

c See page 14, notes.

NOTE.—The Registrars alone must be considered responsible for the accuracy of the figures shown in their Returns, and for the opinions expressed in the foot notes.

REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND, of INFANTS under one year of Age, and of PERSONS aged 60 years and upwards from WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE, also INQUEST CASES and in the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and of ENGLAND.

* The Superintendent Registrars' Districts, 632 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names: they are here arranged topographically under the Registration Counties.

† These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstracts of the Census of 1881. They do not include space occupied by foreshore or tidal water of rivers and creeks. See page 14, note b.

II.—SOUTH EASTERN COUNTIES.—SUPERINTENDENT REGISTRARS' DISTRICTS.—continued.

Superintendent Registrars' Districts.		Area in Statute Acres.	Enumerated Population, 1881.	Marriages Registered in Quarter ending 31 Dec. 1885.	Births Registered in Quarter ending 31 Mar. 1886.	Deaths in Quarter ending 31 Mar. 1886.	The DEATHS in the Quarter are stated by the Registrars to include														
							Deaths of		Deaths from												
							Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Institutions.

a The Town of Dudley is in Worcestershire, but the greater part of the population of the Dudley district (374) being located in Staffordshire, is classed with that Registration county.—See page 2, note a.

b By the Worcester Extension Act of 1885, part of the parish of Hallow (now designated South Hallow civil parish, area 271 acres, and population 509) in the Holt sub-district of Martley 378: 3, and part of the parish of Claines (now designated South Claines civil parish, area 1214 acres, and population 852), in the Claines sub-district of Droitwich 383: 1, were added to the Worcester district. As these alterations took place for registration purposes on 1st October 1885, the areas and populations for the districts of Martley, Worcester, and Droitwich should have been stated as above in the previous Quarterly Return, No. 148.

Superintendent Registrars' Districts.	Area in Statute Acres.	Enumerated Population, 1881.	Mar- riages Registered in Quarter ending 31 Dec. 1885.	Births Registered in Quarter ending 31 Mar. 1886. * The Registration Sub-districts (9143 in number) are sub-divisions of the Superintendent Registrars' Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates Hospital or Infirmary; and L Lunatic Asylum.

b For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 3rd April 1886.

I.—LONDON.—REGISTRATION SUB-DISTRICTS—continued.

b 623 : 3.—Of the 8 deaths from scarlet fever, 2 occurred in Bethesda Urban Sanitary District.

METEOROLOGY OF ENGLAND.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING MARCH 31ST, 1886.

By JAMES GLAISHER, ESQ., F.R.S., &c.

The weather in January, after the first five days, was cheerless and cold; snow fell on every day in the month from the 4th, with the exception of the 14th, at one or other of the stations; on several days it fell at all stations. The temperature of the air was above the average till the 5th day, as well as on the 13th, 14th, and 15th, and on the last day: but on all other days it was below. The atmospheric pressure was generally below its average, particularly on the 13th, when the weather was very stormy with very high wind, the mean pressure for the month was lower than in any January since 1872 when it was 29.463 in., and back to 1841 there have been only two other instances of so low a pressure, viz., in the years 1865 and 1856.

The weather in February was very cold and dull, with scarcely any sunshine. Snow fell on the 1st, 3rd, 4th, 5th, and 6th, and every day from the 14th to the end of the month mostly at the stations in the midland and northern districts. The temperature of the air was below its average on every day, excepting the 13th and 14th, and particularly so from the 7th to the 10th, and from the 23rd. The mean temperature of the month was lower than in any February back to 1855, which was the coldest February this century. The atmospheric pressure was generally above its average. There was an excess of N. and E. winds.

The weather in March till the 18th day was very cold, being nearly 10° below the average, then there was a sudden change to warm weather, the remaining twelve days being $6\frac{1}{2}^{\circ}$ above the average. The atmospheric pressure was variable, being for several days together above, and then for several days together below the average. Snow fell on every day to the 6th, from the 12th to the 19th, and on the last three days of the month. The falls of snow at the beginning of the month were general and in the north were very heavy, causing serious interruption to railway traffic, the main line north of Newcastle was blocked for two or three days and many trains were fast in the snow. The unusual circumstance of skating in London in March existed till the 18th, on this and several preceding days, many thousand persons were on the ice, on the London ponds. Till the 18th there was an excess of east winds, on the 19th a change of wind to S. and S.W. took place which continued to the end of the month; there were thunderstorms on the 29th and 31st.

About London the mean daily temperature of the air was above its average till January 5th the excess being $6^{\circ}6$ daily; from the 6th to the 12th the deficiency was $5^{\circ}7$, for three days there was a slight excess, from January 16th to March 18th the mean temperature was in defect (with the exception of February 13th and 14th which were above by $1^{\circ}9$ and $1^{\circ}0$) the deficiency averaging $6^{\circ}7$; February 8th was below its average by $10^{\circ}5$; the 9th, $12^{\circ}6$; the 10th, $13^{\circ}5$; the 28th, $10^{\circ}3$; March 1st, $9^{\circ}8$; 3rd, $9^{\circ}6$; 4th, $9^{\circ}8$; 7th, $11^{\circ}7$; 8th, $9^{\circ}9$; 9th, $9^{\circ}1$; 10th, $10^{\circ}4$; 11th, $10^{\circ}4$; 12th, $10^{\circ}7$; 13th, $10^{\circ}8$; 14th, $10^{\circ}3$; 15th, $9^{\circ}0$; 16th, $11^{\circ}4$; and the 17th, $11^{\circ}6$. On March 19th a very sudden change of temperature set in and continued till the end of the quarter, the excess being $6^{\circ}3$ daily.

The mean temperature of the air for January was $36^{\circ}1$, being $0^{\circ}4$ and $2^{\circ}4$ below the averages of 115 years and 45 years respectively; it was $0^{\circ}5$, $7^{\circ}8$, and $5^{\circ}1$ lower than in 1885, 1884, and 1883 respectively.

The mean temperature of the air for February was $33^{\circ}7$, being $5^{\circ}0$ and $6^{\circ}0$ below the averages of 115 years, and 45 years respectively; it was $10^{\circ}2$, $8^{\circ}2$, and $8^{\circ}9$ lower than in 1885, 1884, and 1883 respectively.

Back to 1772 there have been but 7 instances of so cold a February, viz.:

In 1784 when it was	$31^{\circ}9$.	In 1785 when it was	$30^{\circ}4$.	In 1827 when it was	$31^{\circ}6$.
„ 1838	„ $32^{\circ}9$.	„ 1845	„ $32^{\circ}7$.	„ 1853	„ $33^{\circ}3$.
„ 1855	„ $29^{\circ}4$.				

The mean temperature of the air for March was $39^{\circ}6$, being $1^{\circ}5$ and $2^{\circ}1$ below the averages of 115 years and 45 years respectively; it was $0^{\circ}7$ and $4^{\circ}9$ lower than 1885, and 1884 respectively, and $3^{\circ}5$ higher than in 1883.

Back to 1741 there have been but 9 instances of so cold a March, viz.:

In 1845 when it was	$35^{\circ}2$.	In 1856 when it was	$38^{\circ}7$.	In 1869 when it was	$37^{\circ}5$.
„ 1853	„ $38^{\circ}5$.	„ 1865	„ $36^{\circ}6$.	„ 1870	„ $39^{\circ}6$.
„ 1855	„ $37^{\circ}9$.	„ 1867	„ $37^{\circ}7$.	„ 1883	„ $36^{\circ}1$.

The mean temperature of the quarter was $36^{\circ}5$, being $2^{\circ}3$ and $3^{\circ}5$ below the averages of 115 years and 45 years respectively.

The mean high day temperature of the air in January was $40^{\circ}8$, being $2^{\circ}1$ below the average of 45 years; in February it was $38^{\circ}0$, being $7^{\circ}7$ below the average of 45 years; and in March it was $47^{\circ}3$, being $2^{\circ}6$ below the average of 45 years.

The mean low night temperature of the air in January was $30^{\circ}9$, being $2^{\circ}7$ below the average of 45 years; in February it was $29^{\circ}8$, being $4^{\circ}8$ below the average of 45 years; and in March it was $33^{\circ}5$, being $1^{\circ}7$ below the average of 45 years.

The mean daily range of temperature in January was $9^{\circ}9$, being $0^{\circ}4$ larger than the average; in February it was $8^{\circ}2$, being $2^{\circ}9$ smaller than the average; in March it was $13^{\circ}8$, being $1^{\circ}0$ smaller than the average.

The mean temperature of the air for January was $2^{\circ}8$ lower than in December; in February it was $2^{\circ}4$ lower than in January; and in March it was $5^{\circ}9$ higher than in February.

(From the preceding 45 years' observations the decrease of temperature from December to January is $1^{\circ}4$, the increase from January to February is $1^{\circ}2$, and the increase from February to March is $2^{\circ}0$.)

From December to January there was a decrease of temperature of stations south of 51° of $2^{\circ}8$, between 51° and 52° of $2^{\circ}6$, between 52° and 53° of $2^{\circ}6$, between 53° and 54° of $3^{\circ}5$, and north of 54° of $2^{\circ}9$.

From January to February there was a decrease of temperature at stations south of 51° of $1^{\circ}7$, between 51° and 52° of $2^{\circ}0$, between 52° and 53° of $1^{\circ}9$, between 53° and 54° of $0^{\circ}9$, and north of 54° of $0^{\circ}2$.

From February to March there was an increase of temperature at stations south of 51° of $3^{\circ}2$, between 51° and 52° of $5^{\circ}4$, between 52° and 53° of $5^{\circ}3$, between 53° and 54° of $3^{\circ}1$, and north of 54° of $4^{\circ}1$.

NOTE.—In reading this table it will be borne in mind that the plus sign (+) signifies above the average, and the minus sign (—) signifies below the average.

Average duration of the different directions of the wind referred to eight points of the compass, and duration of each direction in each month in the quarter, were as follows:—

Direction of Wind.	JANUARY.			FEBRUARY.			MARCH.		
	1886.	Average.	Departure from Average.	1886.	Average.	Departure from Average.	1886.	Average.	Departure from Average.
N.W.	7	1½	+ 5½	4½	2	+ 2½	2½	2½	— ½
N.	1½	3½	— 2	3½	3	+ ½	3½	3½	— 3
N.E.	1½	3½	— 1½	5	3½	+ 1½	4½	4	+ ½
E.	4½	3½	+ 3½	8½	2	+ 6½	8	2½	+ 5½
S.E.	4½	2½	+ 2½	1½	1½	0	2	2	— 1½
S.	2½	4½	— 2	1	3	— 2	2	2½	— 2
S.W.	7½	9½	— 2	½	8	— 7½	10½	7½	+ 3
W.	1	3½	— 2½	2½	2½	— 2	2½	3½	— 1
Calm.	½	2½	+ 1½	2½	2½	0	0	2½	— 2½

The plus sign (+) denotes excesses over averages; the largest numbers affected with this sign in the month of January are opposite to N.W. and E.; in February to E. and N.W.; and in March to E. and S.W.

The minus sign (—) denotes deficiencies below averages. In January the largest numbers are opposite to W., N., S., and S.W.; in February to S.W., S., and W.; and in March to N. and S.

The mean reading of the barometer at the height of 159 ft. above the level of the sea for the month of January was 29.475 ins., being 0.280 in. below the average of 45 years, 0.238 in., 0.440 in., and 0.260 in. lower than in 1885, 1884, and 1883 respectively.

The mean reading of the barometer for the month of February was 29.945 ins., being 0.159 in. higher than the average of 45 years, and 0.402 in., 0.201 in., and 0.041 in. higher than in 1885, 1884, and 1883 respectively.

The mean reading of the barometer for the month of March was 29.792 ins., being 0.040 in. above the average of 45 years, and 0.108 in. lower than in 1885, 0.030 in., and 0.043 in. higher than in 1884 and 1883 respectively.

From December to January there was a decrease of pressure at stations south of 51° of 0.537 in., between 51° and 52° of 0.544 in., between 52° and 53°, of 0.556 in., between 53° and 54° of 0.548 in., and north of 54° of 0.547 in.

From January to February there was an increase of pressure at stations south of 51° of 0.413 in., between 51° and 52° of 0.458 in., between 52° and 53° of 0.488 in., between 53° and 54° of 0.502 in., and north of 54° of 0.559 in.

From February to March there was a decrease of pressure at stations south of 51° of 0.167 in., between 51° and 52° of 0.163 in., between 52° and 53° of 0.177 in., between 53° and 54° of 0.200 in., and north of 54° of 0.188 in.

About London the barometric pressure was alternately above and below its average for two and three days together, till January 12th; from January 13th to February 3rd the readings were very low, the deficiency being 0.41 in., from the 4th to the 27th there was an excess of pressure to the amount of 0.23 in., this was followed by a week of low readings, the deficiency averaging 0.42 in., and from March 15th to the end of the quarter it was alternately for five and six days together slightly in excess and deficiency of the daily average.

Thunderstorms occurred in January, on the 5th at Halifax, on the 16th at Guernsey, Truro, Plymouth, Torquay, Salisbury, Bath, on the 17th at Guernsey, on the 19th at Torquay, on the 25th at Guernsey, on the 26th at Osborne, and on the 31st at Lowestoft, Somerleyton, and Halifax.

No thunderstorms occurred in February.

In March, on the 29th at Nottingham, and on the 31st at Truro, Plymouth, Torquay, Osborne, Llandudno, and Stonyhurst.

Thunder was heard but lightning was not seen in March, on the 29th at Somerleyton and Leicester.

Lightning was seen but thunder was not heard in January, on the 16th and 19th at Torquay; on the 26th at Torquay and Osborne; on the 30th at Halifax; on the 31st at Lowestoft.

In March, on the 22nd at Bradford; on the 27th at Stonyhurst; and on the 31st at Liverpool.

Solar halos were seen in January, on the 6th at Oxford; on the 21st at Torquay.

In February, on the 2nd at Oxford.

In March, on the 4th, 7th, 9th, and 11th at Torquay; on the 22nd at Halifax; and on the 27th at Oxford.

Lunar halos were seen in January, on the 14th at Torquay and Oxford; on the 15th at Oxford; on the 16th at Lowestoft; on the 17th at Torquay; on the 19th and 20th at Oxford.

In February, on the 13th at Oxford and Halifax; and on the 15th at Burslem.

In March, on the 14th at Torquay; on the 17th at Barnet; and on the 19th at Guernsey and Torquay.

Aurora Borealis was seen in January on the 9th at Torquay.

In March on the 31st at Liverpool.

Snow. Throughout the month of January snow fell on every day from the 4th, with the exception of the 14th at one or other of the stations, and on several days it fell at all stations.

In February snow fell on every day, except on the 2nd, and from the 7th to the 13th mostly in midland and northern counties.

In March on eighteen different days at different stations, falling mostly in midland and northern counties.

Hail fell in January, on the 5th at Guernsey, Torquay, Liverpool, Stonyhurst, and Carlisle; on the 6th at Guernsey, Lowestoft, and Hull; on the 8th at Guernsey, Truro, Torquay, Ventnor, and Llandudno; on the 11th at Guernsey; on the 12th at Guernsey, and Truro; on the 13th at Guernsey, Truro, Plymouth, Torquay, Bath, Burslem; on the 15th at Liverpool, Halifax, and Stonyhurst; on the 16th at Guernsey, Torquay, Liverpool, Halifax, and Stonyhurst; on the 17th at Guernsey, Oxford, and Stonyhurst; on the 18th at Guernsey, Truro, Torquay, and Liverpool; on the 19th at Truro, Torquay; on the 20th at Torquay; on the 26th at Torquay; on the 30th at Llandudno; and on the 31st at Barnet, Oxford, Leicester, Nottingham, and Bradford.

In February, on the 1st at Torquay and Stonyhurst; on the 2nd and 3rd at Truro; on the 4th at Royston; on the 5th at Osborne; on the 6th at Cardington; and on the 27th at Oxford.

In March, on the 1st at Oxford; on the 2nd at Truro; on the 16th and 17th at Hull; on the 21st and 22nd at Rugby; on the 29th at Cambridge, Wolverhampton, Nottingham, and Hull; on the 30th at Truro, Rugby; on the 31st at Truro, Plymouth, Torquay, Osborne, Whitechurch, Barnet, Royston, Somerleyton, Burslem, Llandudno, Liverpool, Hull, Stonyhurst, and Bradford.

Year 1886.	Month.	Names of Stations and Observers.	Height of Station above Sea Level.	Pressure of Air in Month.			Temperature of Air in Month.			Mean Temperature.			Mean Tem- perature.			Vapour.			Mean Degree of Humi- dity, Sat. = 100.	Mean Weight of a cubic foot of Air.	Mean Reading of Thermometer.			Mean Amount of Ozone.	Wind. Direction and Force.	Relative Proportion of Wind.	Mean Amount of Cloud.	Number of Days it fell.	Amount col- lected.	Rain.	
				Range.	Mean.	In.	Range.	Mean.	Lowest.	Highest.	Range.	Mean.	Of all Highest.	Of all Lowest.	Daily Range.	Air.	Dew Point.	Elastic Force.			Mean.	Short of Saturation.	Maximum in Rays of Sun.								Minimum on Grass.

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Mean Estimated Strength.	WIND.				Mean Amount of Ozone.	RAIN.			
																			Relative Proportion of					Mean Amount of Cloud.	Number of Days on which it fell.	Amount collected.

[Price 9d.]

General Register Office, Somerset House,
31st July, 1886.

The POPULATION of the UNITED KINGDOM in the middle of 1886 is estimated at 36,707,418 persons; that of England and Wales at 27,870,586, of Scotland at 3,949,393, and of Ireland at 4,887,439.

In the United Kingdom the *births* of 294,586 children, and the *deaths* of 166,870 persons, were registered in the three months ending 30th June 1886. The natural increase of population was, therefore, 127,716. The registered number of persons married in the quarter ending 31st March 1886 was 104,828.

The birth-rate in the United Kingdom in the second quarter of 1886 was 32·2 and the death-rate 18·2 per 1000. The marriage-rate in the first quarter of 1886 was 11·6 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered in the 2143 registration sub-districts of England and Wales during the quarter ending 30th June 1886; and the MARRIAGES in 14,796 churches or chapels, in 9641 registered places of worship unconnected with the Established Church, and in 632 Superintendent Registrars' Offices, in the three months ending 31st March 1886.

Marriages.

During the three months ending with March last, the marriages of 78,234 persons were registered in England and Wales, corresponding to an annual rate of 11·4 per 1000 of the estimated population in the middle of 1886. This marriage-rate was 1·1 below the mean rate in the corresponding quarters of the ten years 1876–85, and was lower than the rate recorded in the first quarter of any year since civil registration was established in 1837. The lowest recorded marriage-rate in the second quarter of any year since that date was 11·5 in 1879 and 1885. The lowest rates in the first quarter of this year were 6·9 in Hertfordshire, 8·0 in the extra-municipal portion of Middlesex, and 8·1 in Berkshire and

in Westmorland. The rates in the other registration counties ranged upwards to 13·0 in Lancashire and in Dorsetshire, 13·5 in the East Riding, 13·7 in Devonshire, and 14·0 in Monmouthshire.

Births.

The births registered in England and Wales during the three months ending with June last were 230,924, corresponding to an annual rate of 33·2 per 1000 of the estimated population. This birth-rate was 1·9 below the mean rate in the corresponding quarters of the ten years 1876-85, but was 0·8 above the exceptionally low rate that prevailed in the second quarter of last year. The rate did not exceed 27·0 in Essex, 27·9 in Sussex, and 28·0 in Westmorland; whereas it ranged upwards to 37·2 in Northumberland, 37·8 in Staffordshire, 38·8 in Monmouthshire, and 38·9 in Durham.

In the twenty-eight great towns the births registered last quarter corresponded to an annual rate of 33·1 per 1000, which was 0·1 below the general English rate. The rate was 31·9 in London, and 34·2 in the twenty-seven provincial towns, among which it ranged from 24·9 in Brighton and in Huddersfield, and 29·3 in Bradford, to 39·0 in Preston, 39·3 in Newcastle-upon-Tyne, and 42·0 in Cardiff. In fifty other large town districts the mean birth-rate was 34·5, and was 1·4 above the rate in the great towns. The lowest rates among these fifty towns were 22·0 in Hastings, 23·9 in Southport, 24·5 in Bath, 24·6 in Rochdale, and 24·8 in Cheltenham; the highest rates were 40·5 in St. Helen's, 41·1 in Stoke-upon-Trent, 41·2 in South Shields, and 42·5 in Newport.

Movement of the Population.

The natural increase of the population of England and Wales, or the excess of births over deaths, which had been 103,231 and 90,078 in the second quarters of 1884 and 1885, rose to 105,752 in the three months ending June last. It appears from returns issued by the Board of Trade that 119,126 emigrants embarked during last quarter from the various ports of the United Kingdom at which emigration officers are stationed. Distributing 684 whose nationality was undistinguished, and excluding 37,004 foreigners, the emigrants of British origin were 82,122, including 43,959 English, 8481 Scotch, and 29,682 Irish. The numbers of British emigrants in the three preceding corresponding quarters were 134,707, 92,451, and 76,604, respectively. The proportions of emigrants last quarter to a million of the population in the three divisions of the United Kingdom were 1,577 from England, 2,147 from Scotland, and 6,073 from Ireland. Compared with the corresponding quarter of 1885 the proportion of emigration last quarter showed a slight increase in England and Scotland, whereas in Ireland it was lower than in the second quarter of any year since 1879.

Prices and Pauperism.

The average price of wheat during the three months ending with June last was 31s. 4d., and showed an increase of 1s. 7d. upon the exceptionally low price in the preceding quarter. The mean wholesale prices of beef and of mutton were 5½d. and 7d. per lb. respectively; the mean price of beef showed an increase of ⅔d., and that of mutton an increase of 1⅔d. upon the prices in the preceding quarter. The average price of the best sea-borne coal in the London market, put in barge from the collier in the Thames, was 14s. 5d. per ton, against 14s. 11d. and 15s. 9d. in the two preceding second quarters. The mean price of Consols was 101½, and higher than in any previous quarter since the second of 1884. The minimum annual rate of discount charged at the Bank of England, which had been reduced to 2 per cent., on 18th February last, was raised to 3 per cent. on 6th May, and was again reduced to 2½ per cent. on 10th June; the average rate during the quarter was 2·50 per cent.

The average number of paupers (exclusive of lunatics in asylums, and vagrants) relieved in England and Wales on the last day of each week in the quarter was 733,747, of whom 176,074 received in-door and 557,673 out-door relief. The proportion of the population in receipt of pauper relief during the three months ending with June last was 26.3 per 1000, against 25.7 and 25.4 in the two preceding corresponding quarters.

Meteorology.

The remarks upon the Meteorology of the quarter at the Royal Observatory, Greenwich, and at various other stations of observation, furnished by Mr. James Glaisher, F.R.S., with accompanying Tables, will be found on pages 65-72. The mean reading of the barometer at Greenwich was 29.769 inches, and was 0.012 below the mean reading for the corresponding periods of 45 years; the mean reading was below the average in each of the three months, the largest deficiency occurring in May. The mean temperature of the air during the quarter was 52°.5. and was 0°.2 above the average for the corresponding periods of 115 years. The mean temperature in April and May was rather above, while in June it was slightly below the average. The weather in April was for the most part cold and stormy until the 18th, after which it was variable; the greater part of May was also cold and stormy, and with few exceptions the weather was, until the last week, cold during June. At 33 stations of observation the mean temperature during the quarter ranged from 48°.0 in Wolverhampton, Halifax, and Hull, to 52°.6 in Plymouth, 53°.3 in Brighton, and 54°.9 in Barnstaple.

The amount of rain measured at Greenwich during the quarter was 5.93 inches, and was 0.14 of an inch above the average amount in the corresponding periods of 71 years. The rainfall showed a considerable excess in May, but was below the average in April and June. Rain was measured at Greenwich on 12 days in April, 15 in May, and 9 in June, or in 36 of the 91 days in the quarter. The rainfall recorded in 33 stations of observation ranged from 3.92 inches at Somerleyton, and 4.66 inches at Cambridge, to 10.38 inches at Halifax, and 12.81 inches at Stonyhurst.

The number of hours of bright sunshine recorded during the quarter at the Royal Observatory, Greenwich, was 494.4, which exceeded by 22.7 hours the average amount recorded in the corresponding periods of the nine years 1877-85.

State of the Public Health; Deaths.

During the three months ending with June last 125,172 deaths were registered in England and Wales, corresponding to an annual rate of 18.0 per 1000 of the estimated population. This death-rate was 1.9 below the average rate in the corresponding quarters of the ten years 1876-85, and was lower than the rate recorded in the second quarter of any year since civil registration was established in 1837. The death-rate in the second quarter of the year fell below 20 per 1000 for the first time in 1880, since which it has only once (in 1883) touched this figure, and has been three times below 19. The lowest county rates last quarter were 15.0 in Sussex, 15.1 in Surrey (extra-met.) 15.3 in Westmorland, and 15.9 in Middlesex (extra-met.); while the highest rates were 20.3 in Lancashire, 20.4 in South Wales, 21.9 in Cornwall, and 22.3 in Monmouthshire.

The 125,172 deaths last quarter included 64,917 of males, and 60,255 of females. The annual death-rate among males was 19.2, and among females 16.9 per 1000 estimated to be living of each sex. In equal numbers living the deaths of males were 114 to 100 of females; in the corresponding quarters of 1884 and 1885 the proportion that prevailed was also 114 deaths of males to 100 of females.

URBAN AND RURAL MORTALITY.—In the registration districts and sub-districts comprising the chief towns (see Table III.) and containing an estimated population of nearly seventeen millions, the death-rate was 18.3 per 1000; in the remaining

and chiefly rural population of nearly eleven millions of persons, the rate was 17·5. These urban and rural rates were respectively 2·6 and 1·0 below the average rates in the ten preceding corresponding quarters. In equal numbers living, the deaths were 104·6 in the urban to 100 in the rural population, whereas the average proportion in the second quarters of the ten years 1876-85 was 113 to 100.

In the twenty-eight great English towns, including London, and having an estimated population of rather more than nine millions of persons, the registered deaths corresponded to an annual rate of 18·6 per 1000, which was 0·3 above the general urban rate. The death-rate was 17·2 in London, and averaged 19·8 in the twenty-seven provincial towns, among which it ranged from 15·3 in Brighton, 16·6 in Birkenhead, 16·7 in Hull, and 16·8 in Bristol, to 23·9 in Portsmouth, 25·1 in Blackburn, 25·2 in Manchester, and 30·3 in Preston.

In fifty other large town districts, with an aggregate population estimated at nearly three millions of persons, the registered deaths corresponded to an annual rate of 18·3 per 1000, which was 0·3 above the general English rate, and 0·3 below the rate in the twenty-eight larger towns. The lowest rates among these fifty towns were 12·0 in Gloucester, 12·6 in Hastings, 13·4 in Burton-upon-Trent, 13·5 in Maidstone, and 13·9 in Darlington; the rates in the other towns ranged upwards to 24·1 in Merthyr Tydfil, 24·5 in Ashton-under-Lyne, and 28·3 in Ystradyfodwg.

MORTALITY AT DIFFERENT AGES.—The deaths last quarter included 28,330 of infants under one year of age, 61,496 of children and adults aged between one and 60 years, and 35,346 of persons aged upwards of 60 years.

Infant mortality, or the proportion of deaths under one year to registered births, was 123 per 1000; in the ten preceding corresponding quarters the mean proportion was 127, and ranged from 121 in 1881 and 1884, to 133 in 1885. The lowest county rates last quarter were 88 in Surrey (extra-met.), 93 in Dorsetshire, and 94 in Oxfordshire and in Westmorland; while the highest were 138 in Shropshire, 141 in Lancashire and in Cornwall, and 150 in Monmouthshire.

In the twenty-eight great towns the deaths of infants were in the proportion of 133 to 1000 registered births, and 10 above the general English rate. The rate was 124 in London and 140 in the twenty-seven provincial towns, among which it ranged from 108 in Brighton, 110 in Sunderland, and 114 in Norwich, to 157 in Manchester, 159 in Bradford, 160 in Salford, 186 in Blackburn, and 224 in Preston.

In fifty other large town districts the rate was 131 per 1000 registered births; the proportion was only 54 in Darlington, 60 in Gloucester, 65 in Cambridge, 69 in Colchester, and 81 in Burton-upon-Trent and in Hastings; it ranged upwards in the other towns to 169 in Accrington, 177 in Bury, 181 in Ystradyfodwg, and 192 in Merthyr-Tydfil and in Rochdale.

Among persons aged between one and 60 years the deaths corresponded to an annual rate of 9·9 per 1000, against an average of 11·5 in the ten preceding second quarters. In the twenty-eight great towns the deaths at these ages corresponded to an annual rate of 11·1, ranging from 8·3 and 8·7 in Norwich and Brighton, to 14·4 in Bolton, 14·9 in Oldham, 15·1 in Portsmouth, 16·2 in Manchester, and 18·6 in Preston.

The deaths among persons aged upwards of 60 years were equal to an annual rate of 69·0 per 1000, which was 0·6 below the mean rate in the ten preceding second quarters, in which the rates at this group of ages ranged from 77·5 in 1879, to 62·7 in 1882. The death-rate at these ages in the twenty-eight towns last quarter was 68·4, and was 0·6 below the general English rate. In London the rate was 63·2, while it averaged 73·4 in the twenty-seven provincial towns, and ranged from 57·6 in Cardiff, 60·1 in Brighton, 60·2 in Sunderland, and 60·9 in Bristol, to 93·5 in Manchester, 95·7 in Bolton, 97·8 in Halifax, and 110·3 in Blackburn.

During last quarter the death-rate of infants was 3·1 per cent., of children and adults aged between one and 60 years was 13·9 per cent., and of persons aged upwards of 60 years was 0·9 per cent., below the respective mean rates in the ten preceding corresponding quarters.

ZYMOTIC DISEASES.—The 125,172 deaths from all causes included—

3396	attributed to whooping-cough,
2882	„ measles,
1667	„ diarrhœa,
1069	„ fever,
937	„ scarlet fever,
769	„ diphtheria,
105	„ small-pox.

Thus the total number of deaths ascribed to these zymotic causes was 10,825, and corresponded to an annual death-rate of 1·55 per 1000, whereas the mean rate from these diseases in the ten preceding second quarters was 2·25. The mortality from diphtheria corresponded with the average, whereas the death-rate from each of the other diseases was below the average, the most marked decline occurring in the deaths from scarlet fever, small-pox, and fever. The lowest rates from these zymotic causes were 0·66 in Cumberland, 0·68 in Norfolk, 0·69 in Westmorland, and 0·73 in Oxfordshire; the highest rates were 2·29 in South Wales, 2·33 in Hampshire, and 3·14 in Monmouthshire.

The rate in the aggregate of the twenty-eight great towns was 1·86, and ranged from 0·63 and 0·65 in Huddersfield and Norwich, to 3·88 in Blackburn, 4·33 in Bolton, 5·48 in Portsmouth, and 6·93 in Preston. In fifty other considerable towns the rate averaged 1·67, and ranged upwards to 3·05 in Accrington, 3·79 in Bury, 3·82 in St. Helens, and 8·94 in Ystradyfodwg. In the remainder of England and Wales the zymotic rate did not exceed 1·36.

The 3396 deaths from *whooping-cough* corresponded to an annual rate of 0·49 per 1000, against a mean rate of 0·54 in the ten preceding second quarters. No death from this disease was registered in Rutlandshire, and its mortality was under 0·20 in Norfolk, Wiltshire, and Leicestershire; while it was 0·73 in Suffolk, 0·74 in Cornwall, 0·77 in Essex, and 1·54 in Monmouthshire.

In the twenty-eight great towns the rate was 0·58, and ranged from 0·02 in Bradford, 0·12 in Leeds, 0·14 in Blackburn and in Huddersfield, and 0·15 in Halifax, to 0·76 in London, 0·91 in Newcastle-upon-Tyne, and 0·97 in Manchester and in Salford. In fifty other considerable towns the mean rate was 0·47; the highest rates were 1·24 in Shrewsbury, 1·26 in Accrington, 1·44 in Rotherham, 1·77 in Newport, and 1·87 in Merthyr-Tydfil. In the remainder of England and Wales the rate was 0·44, and showed a marked excess in the sub-districts of Whitstable, Lymington, Abingdon, Abthorpe, St. Ives, Willingham, Rattlesden, Botesdale, St. Keverne, Stroud, Beighton, and Maesteg.

The 2882 deaths from *measles* corresponded to an annual rate of 0·41 per 1000, against an average rate of 0·47 in the ten preceding second quarters. No death from this disease was registered in Wiltshire, Dorsetshire, or Westmorland and the rate was less than 0·05 in Berkshire, Oxfordshire, the North Riding, Cumberland, and North Wales; it ranged upwards to 0·96 in Northamptonshire, 1·07 in Hampshire, 1·12 in Warwickshire, and 1·57 in Rutlandshire.

In the twenty-eight great towns the mean rate was 0·59, but while the rate was 0·00 in Brighton, Norwich, Wolverhampton, Derby, and Halifax, it ranged upwards to 2·62 in Blackburn, 3·10 in Bolton, 3·45 in Portsmouth, and 5·19 in Preston. In fifty other considerable towns the mean rate was 0·47, the highest rates being 1·63 in Ashton-under-Lyne, 1·91 in Lincoln, 2·23 in Bury, 2·40 in Exeter, and 5·08 in Ystradyfodwg. In the remainder of England and Wales the rate was only 0·30, but showed a marked excess in the sub-districts of Alverstoke, Aylesbury, Waddesdon, Wellingborough, Raunds, Crediton, Tiverton, Tamworth, Wednesbury, Harborne, Congleton, Mottram, Beighton, and Pembroke.

The 1667 deaths attributed to *diarrhœa* and *dysentery* corresponded to an annual rate of 0·24 per 1000, against an average rate of 0·28 in the ten preceding second quarters.

The county rates ranged from 0·09 in Sussex and Berkshire, 0·13 in Kent (extra-met.), and 0·15 in Cambridgeshire, to 0·36 in Lancashire, 0·41 in Staffordshire, and 0·52 in Rutlandshire.

The rate in the twenty-eight towns was 0·27, and ranged upwards to 0·50 in Wolverhampton, 0·51 in Cardiff, 0·55 in Salford and in Preston, and 0·81 in Blackburn. In fifty other considerable towns the rate averaged 0·24, and was equal to 0·66 in Worcester, and 0·81 in Bury. In the remainder of England and Wales the rate was 0·22.

The 1069 deaths from *fever*, including typhus, enteric fever, and simple and ill-defined forms of continued fever, corresponded to an annual rate of 0·15 per 1000. This rate was considerably below the rate from this disease in any previous quarter on record, and was 0·13 below the mean rate in the ten preceding second quarters.

The rate was under 0·03 in Dorsetshire, Rutlandshire, and Westmorland, while the highest county rates were 0·25 in Hampshire, 0·29 in Kent (extra-met.) and 0·36 in South Wales.

In the twenty-eight great towns the mean rate was 0·15, corresponding with the general rate in England and Wales; the rate ranged from 0·00 in Halifax and in Oldham, and 0·03 in Brighton, to 0·26 in Derby, 0·44 in Preston, and 0·53 in Portsmouth. In fifty other considerable towns the rate averaged 0·20, but ranged upwards to 0·68 in Ystrad-y-fodwg, 0·81 in Swansea, and 1·49 in Shrewsbury. In the remainder of England and Wales the rate was 0·15, showing, however, an excess in the neighbouring sub-districts of Faversham, Milton, Minster, and Ramsgate and in Dartford, all in the extra-metropolitan portion of the county of Kent.

The 937 deaths from *scarlet-fever* corresponded to an annual rate of 0·13 per 1000, which was considerably below the rate in any previous quarter on record, and was 0·33 below the mean rate in the second quarters of the ten years 1876-85.

No death from this disease was registered during the quarter in Kent (extra-met.) Oxfordshire, Huntingdonshire, Rutlandshire, or Westmorland; while the highest county rates were 0·25 in the West Riding, 0·35 in Durham, and 0·36 in South Wales.

In the twenty-eight great towns the rate was 0·14, and slightly in excess of the general English rate; it was 0·00 in Brighton and in Derby, and ranged upwards to 0·28 in Salford, 0·36 in Manchester, and 0·41 in Leeds. In fifty other considerable towns the rate averaged 0·20, and was equal to 1·50 in St. Helens and 2·20 in Ystrad-y-fodwg. In the remainder of England and Wales the rate did not exceed 0·12; the disease showed, however, fatal prevalence in Enderby and Lanchester sub-districts.

The 769 deaths ascribed to *diphtheria* were equal to an annual rate of 0·11 and corresponded with the mean rate in the ten preceding second quarters.

No death from this disease was registered in Herefordshire or in the North Riding; while the highest rates were 0·23 in Hertfordshire, 0·24 in Middlesex (extra-met.), 0·25 in Westmorland, 0·26 in Cornwall, and 0·53 in Dorsetshire.

In the twenty-eight great towns the mean rate was 0·13; whereas no deaths from this disease were recorded in Derby, Blackburn, Huddersfield, Sheffield, or Hull, the rates ranged upwards to 0·29 in Portsmouth, 0·30 in Wolverhampton, and 0·34 in Oldham. In fifty other considerable towns the rate averaged 0·08, but was equal to 0·41 in Northampton, and 0·56 in Lincoln. In the remainder of England and Wales it was 0·11, showing fatal prevalence in Bradford Abbas, Beaminster, St. Just, Knowle, and Nevin sub-districts.

The 105 deaths from *small-pox* were fewer than in any quarter since the third of 1880, when they were but 69; they corresponded to an annual rate of 0·02 per 1000, against an average of 0·11 in the ten preceding corresponding quarters.

Of the 105 fatal cases of this disease, 13 belonged to Greater London, 6 occurred in Sevenoaks, 8 in Bristol and its neighbourhood, 4 in Blackburn, 3 in Middlesbrough, 22 in Hartlepool, 6 in Easington, and 43 in other parts of England and Wales.

The following Table shows the relative mortality from each of the above-mentioned zymotic diseases in the twenty-eight great towns, in the fifty other considerable urban districts, and in the remainder of the country :—

ANNUAL DEATH-RATE per 1,000 from several ZYMOTIC DISEASES during the Second Quarter of 1886.

	From Diseases in Cols. 2-8.	Small- pox.	Measles.	Scarlet Fever.	Diph- theria.	Whoop- ing- cough.	Fever.	Diar- rhoea.

WATERING PLACES AND SUMMER RESORTS.—The deaths registered in the registration districts and sub-districts taken as approximately representing the forty-six principal English watering places (Table VIII.) corresponded to an annual death-rate of 15·6 per 1000, against 17·9, 16·0, and 16·1 in the three preceding corresponding quarters. Of this death-rate 0·97 was due to the principal zymotic diseases, which was considerably below the zymotic rate in the comparatively rural parts of the country that remain after excluding the seventy-eight chief towns or urban districts, as shown in the foregoing Table.

CERTIFICATION OF CAUSES OF DEATH.—The causes of 114,331, or 91·3 per cent., of the 125,172 deaths in England and Wales were duly certified by registered medical practitioners, and 6706, or 5·4 per cent., by coroners in inquest cases. The causes of the remaining 4135, or 3·3 per cent., of the deaths were not certified. The proportion of uncertified deaths did not exceed 1·2 per cent. in London, whereas it was 3·7 per cent. in the rest of England and Wales. The per-centage of uncertified deaths was only 0·6 in Buckinghamshire, and 1·1 Wiltshire, whereas it ranged upwards in the other English counties to 5·3 in Durham, 5·7 in Cornwall, and 8·1 in Huntingdonshire. In Wales 7·9 per cent. of the causes of death were uncertified, the proportions being 9·0 in North Wales and 7·3 in South Wales.

In the twenty-eight great towns the proportion of uncertified deaths was 2·3 per cent.; but while it did not exceed 1·2 in London, it averaged 3·1 in the twenty-seven provincial towns. The per-centages in these provincial towns ranged from 1·2 in Portsmouth, 1·4 in Brighton, and 1·5 in Plymouth and in Nottingham, to 4·7 in Salford, 4·9 in Sheffield, 5·1 in Liverpool, 5·5 in Oldham, 5·7 in Hull, and 7·2 in Halifax.

VIOLENT DEATHS.—The deaths referred to different forms of violence were 4013; they corresponded to an annual rate of 0·58 per 1000 of the estimated population, and were equal to 3·2 per cent. of the total deaths, corresponding with the percentage in the ten preceding second quarters of the year. The death-rates from violence ranged from 0·26 and 0·29 in Oxfordshire and Wiltshire, to 0·71 in Warwickshire, 0·72 in Somersetshire, and 0·74 in Northumberland.

In the twenty-eight great towns the deaths from violence corresponded to an annual rate of 0·65 per 1000; the lowest rates in these towns were 0·20 in Preston and 0·31 in Bradford, while they ranged upwards in the other towns to 0·82 in Manchester, 0·84 in Liverpool, 0·85 in Newcastle-upon-Tyne, and 1·00 in Cardiff.

INQUESTS.—The 6706 inquest cases were in the proportion of 5·4 per cent. to the total deaths, which slightly exceeded the mean proportion in the ten preceding corresponding quarters. In the twenty-eight great towns the proportion of inquest cases was equal to 6·5 per cent.; the percentage ranged from 1·6 in Oldham, 2·3 in Preston, and 2·6 in Halifax, to 8·0 in Manchester and Derby, 8·3 in Cardiff, 8·5 in Birmingham, and 10·9 in Leicester.

DEATHS IN PUBLIC INSTITUTIONS.—The deaths registered in workhouses, hospitals, and public lunatic asylums numbered 14,038, or 11·2 per cent. of the total deaths; this proportion exceeded by 0·8 per cent. the mean per-centage in the second quarter of the ten years 1876–85. In the twenty-eight great towns 7376, or 17·5 per cent. of the deaths were recorded in the principal public institutions; the per-centage of institution deaths in these towns ranged from 7·3 in Preston, 8·6 in Plymouth, 9·3 in Leeds, and 9·4 in Sheffield, to 18·2 in Birmingham, 18·4 in Wolverhampton, 19·9 in Liverpool and in Manchester, and 22·4 in London.

HEALTH OF COLONIAL AND FOREIGN CITIES.

A summary of the Weekly Returns, with which the Registrar-General is favoured by various local authorities abroad, shows that the average annual death-rate during the quarter ending June last in twenty-eight Colonial and Foreign cities, having an aggregate population of nearly fifteen millions of persons, was equal to 27·4 per per 1000. In the twenty European cities the average rate was 28·0 per 1000, against 18·6 in the twenty-eight large English towns. Among the twenty-eight Colonial and Foreign cities the lowest death-rates were 19·4 in Christiania and in Philadelphia, 19·9 in the Hague, 20·1 in Brooklyn, and 21·0 in Baltimore; in the other towns the rates ranged upwards to 36·5 in St. Petersburg, 38·9 in Prague and in Buda-Pesth, 39·3 in Venice, 48·8 in Cairo, and 50·1 in Alexandria. The death-rate in Paris was 25·0, and was 7·8 above the rate that prevailed in London; the deaths included 898 from diarrhoeal diseases, 414 from diphtheria and croup, 160 from “fever,” and 67 from small-pox. Small-pox caused 13 deaths in Brussels, 36 in St. Petersburg, 41 in Vienna, 59 in Prague, and 174 in Buda-Pesth. Measles caused 474 deaths in St. Petersburg, 187 in Berlin, 165 in Vienna, and 164 in Prague. The fatal cases of scarlet fever were 271 in St. Petersburg, 148 in Paris, 117 in Buda-Pesth, and 77 in Hamburg. The deaths referred to diphtheria and croup showed a general decline in the German cities, but 290 were registered in Berlin, 129 in Hamburg, 119 in Buda-Pesth, 103 in Vienna, and 75 in Dresden; 561 deaths from diphtheria were reported in New York and Brooklyn. No fewer than 317 deaths in St. Petersburg resulted from “fever;” and the deaths from this cause showed, as usual, very excessive proportions in the Indian and Egyptian cities. The deaths referred to Asiatic cholera in Venice during the 13 weeks of last quarter were 501; the weekly numbers rose from 2 in the first week to 134 in the week ending June 5th, and declined again to 7 in the last week of the quarter.

PRELIMINARY TABLES.

TABLE I.—Marriages, Births, and Deaths registered in England and Wales in the Years 1876-86, and in each Quarter of those Years.

* Furnished by the Chief Cashier of the Bank of England.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which the best seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns with which the Registrar-General has been favoured by Mr. Richard Meade of the Mineral Statistics Department, Home Office.

592	Swansea - - - - M -	94,089	850	426	36.2	18.2	1.88	142	{ Llanafelach, Swansea, and Llan- samlet Sub-districts.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Imp† D. signifies an Improvement District, and L. G. D. a Local Government District.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situated outside that area.

† The rate of increase of population in Barrow-in-Furness and in Ystradgofwg was so abnormally large between 1871 and 1881 as to preclude the probability of the rate being maintained between 1881 and 1891. The present population of these towns has therefore been estimated from special returns of inhabited houses with which the Registrar-General has been favoured by the local authorities.

TABLE VIII.—Mortality in Districts or Sub-districts containing the principal English Watering Places during the Second or Spring Quarter of 1886.

District Numbers.	WATERING PLACES.	AREA in Acres.	Estimated POPULA- TION in the middle of the Year 1886.	DEATHS registered in the Quarter ending 30th June 1886. † The rates of mortality for these towns have been corrected by the exclusion of deaths occurring in County Hospitals & Lunatic Asylums situated within the districts or sub-districts taken to represent the watering places, or by the exclusion or addition of a portion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken or where the Workhouse is situated outside that area.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1881 has been the same as that which prevailed between 1871 and 1881; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London, and the estimates for its component districts have been adjusted to cast to the estimated total. In calculating the rates of mortality, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring; a similar correction has been made for the deaths registered in the Surrey County Lunatic Asylum situated in the District of Croydon.

TABLE X.—Births and Deaths in the Second Quarter of 1886, in 28 Foreign Cities, having an estimated aggregate Population of 14,886,692 persons.

^a The Registration or Union Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

^b The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^c See page 14, note b.

NOTE.—The Registrars alone must be considered responsible for the accuracy of the figures shown in their Returns, and for the opinions expressed in the foot notes.

* The Registration Sub-districts (2143 in number) are sub-divisions of the Superintendent Registrars' Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates Hospital or Infirmary; and L Lunatic Asylum.

b For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 3rd July 1886.

b 626 : 4.—Of the 6 deaths from diphtheria, 4 occurred in the parish of Nevin.

c 627 : 3.—The 2 deaths from small-pox occurred in the Workhouse Infectious Hospital.

METEOROLOGY OF ENGLAND.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING JUNE 30TH, 1886.

By JAMES GLAISHER, Esq., F.R.S., &c.

The weather in April, after the first week, was cold and stormy till the 18th, and variable afterwards, being at times fine and warm till the 28th, which was a warm day being $6^{\circ}\cdot 0$ above its average, a remarkable sudden fall of temperature took place during the afternoon of this day of 20° ; on the 29th at 9 a.m. the temperature was fully 20° lower than on the 28th at the same hour, and the mean temperature of the day was $8^{\circ}\frac{1}{2}$ below its average. The atmospheric pressure was generally below its average till the 11th day, and afterwards was for a few days together alternately a little in excess or defect of its average. The East wind was unusually prevalent. Snow fell on 8 days, chiefly in the midland and northern counties.

The weather in May after the first three days, and up to the 10th day was fine and generally bright; after this with the exception of a few days between the 18th and the 22nd, the remainder of the month was cold and stormy. The atmospheric pressure was generally above its average till the 9th and between the 19th and the 23rd days, and was generally below during the remainder of the month. There was very little rain till the 11th day, it then fell frequently till the 28th day, the falls on the 11th, 12th, and 13th were remarkable, particularly over the Western and the Midland Counties exceeding 2 inches in amount on the 12th day at many places, and the amount for these three days was 4 inches, or 5 inches, and in some places 6 inches causing very serious floods in Hereford, Shropshire, and adjacent counties. These floods caused very great damage to property, some bridges were washed away and railway traffic was suspended. About London more than one inch and a quarter fell on the 13th, and again on the 24th. The rainfall was in excess of its average at all stations. Snow fell on five days, the last on the 26th at Wolverhampton.

The weather in June excepting the first two days and the last week was cold, but was frequently bright and fine. The atmospheric pressure was variable being for several days together in excess of the average, and then for several days below it, during the last week of the month it was above the average, and the weather was very fine. The rainfall was less than its average at all stations. There was very little either of thunder, lightning, hail, or fog. It was a fine month for securing the hay crop.

About London the mean temperature of the air was for the first six days in April above its average by $3^{\circ}\cdot 3$ daily, from April 7th to the 18th it was $3^{\circ}\cdot 3$ in defect, the 19th being $2^{\circ}\cdot 9$ above its average, from the 20th to the 28th the mean temperature was for three days together alternately below and above its average, from April 29th to May 3rd, there was a mean deficiency of $6^{\circ}\cdot 3$ daily, from the 4th to the 10th the average daily excess was $4^{\circ}\cdot 9$, from the 11th to 17th a mean daily deficiency of $4^{\circ}\cdot 5$, May 18th being $5^{\circ}\cdot 8$ above its average, and the 19th $3^{\circ}\cdot 3$ below, the next three days were in excess of their average values by $3^{\circ}\cdot 1$, from May 23rd to the end of the month there was a deficiency of temperature, being $2^{\circ}\cdot 6$ below the average. The first two days in June were warmer, then followed 22 days of low readings, June 17th, 18th, and 21st being as much as $10^{\circ}\cdot 2$, $10^{\circ}\cdot 1$, and $10^{\circ}\cdot 3$ below their averages, respectively, and from June 25th to the end of the quarter there was an excess of mean temperature averaging $2^{\circ}\cdot 0$ daily.

The mean temperature of the air for April was $46^{\circ}\cdot 4$, being $0^{\circ}\cdot 3$ above the average of 115 years and $0^{\circ}\cdot 7$ below the average of 45 years; it was $1^{\circ}\cdot 3$ lower than in 1885, $1^{\circ}\cdot 3$ higher than in 1884, and $0^{\circ}\cdot 4$ lower than in 1883.

The mean temperature of the air for May was $53^{\circ}\cdot 3$, being $0^{\circ}\cdot 8$ and $0^{\circ}\cdot 8$ above the averages of 115 years, and 45 years respectively; it was $3^{\circ}\cdot 4$ higher than in 1885, $1^{\circ}\cdot 0$ lower than in 1884, and $0^{\circ}\cdot 2$ higher than in 1883.

The mean temperature of the air for June was $57^{\circ}\cdot 8$, being $0^{\circ}\cdot 4$ and $1^{\circ}\cdot 1$ below the averages of 115 years and 45 years respectively; it was $1^{\circ}\cdot 7$, $0^{\circ}\cdot 2$ and $1^{\circ}\cdot 2$ lower than in 1885, 1884, and 1883 respectively.

The mean temperature of the quarter was $52^{\circ}\cdot 5$, being $0^{\circ}\cdot 2$ higher than the average of 115 years, and $0^{\circ}\cdot 4$ below the average of 45 years.

The mean high day temperature of the air in April was $55^{\circ}\cdot 8$, being $1^{\circ}\cdot 7$ below the average of 45 years; in May it was $64^{\circ}\cdot 0$, being $0^{\circ}\cdot 2$ below the average of 45 years; and in June it was $69^{\circ}\cdot 6$, being $1^{\circ}\cdot 2$ below the average of 45 years.

The mean low night temperature of the air in April was $38^{\circ}\cdot 9$, being $0^{\circ}\cdot 2$ below the average of 45 years; in May it was $43^{\circ}\cdot 6$, being $0^{\circ}\cdot 1$ below the average of 45 years; and in June it was $47^{\circ}\cdot 9$, being $2^{\circ}\cdot 0$ below the average of 45 years.

The mean daily range of temperature in April was $16^{\circ}\cdot 9$, being $1^{\circ}\cdot 5$ less than the average; in May it was $20^{\circ}\cdot 4$, being $0^{\circ}\cdot 1$ less than the average; and in June it was $21^{\circ}\cdot 7$, being $0^{\circ}\cdot 7$ greater than the average.

The mean temperature of the air for April was $6^{\circ}\cdot 8$ higher than in March; in May it was $6^{\circ}\cdot 9$ higher than in April; and in June it was $4^{\circ}\cdot 5$ higher than in May.

(From the preceding 45 years' observations the increase of temperature from March to April is $5^{\circ}\cdot 4$, the increase from April to May is $5^{\circ}\cdot 4$, and the increase from May to June is $6^{\circ}\cdot 4$.)

From March to April there was an increase of temperature at stations south of 51° of $5^{\circ}\cdot 8$, between 51° and 52° of $7^{\circ}\cdot 1$, between 52° and 53° of $5^{\circ}\cdot 6$, between 53° and 54° of $5^{\circ}\cdot 5$, and north of 54° of $5^{\circ}\cdot 7$.

NOTE.—In reading this table it will be borne in mind that the plus sign (+) signifies above the average, and the minus sign (−) signifies below the average.

Average duration of the different directions of the wind referred to eight points of the compass, and duration of each direction in each month in the quarter, were as follows:—

Direction of Wind.	APRIL.			MAY.			JUNE.		
	1886.	Average.	Departure from Average.	1886.	Average.	Departure from Average.	1886.	Average.	Departure from Average.
N.W.	2	2½	- ½	1	1½	- ½	4½	2½	+ 2½
N.	3½	4½	- 1	½	4½	- 4½	4½	3½	+ 1½
N.E.	5½	6½	- ½	1½	7½	- 5½	2	3½	- 1½
E.	8	3½	+ 4½	10½	2½	+ 8½	7½	2½	+ 5½
S.E.	0	2½	- 2½	1½	1½	0	½	1½	- 1½
S.	2½	2½	+ ½	4½	2½	+ 1½	1½	2½	- ½
S.W.	5½	6½	- 1	6½	8½	- 1½	3½	10	- 6½
W.	2½	2½	0	4½	2½	+ 2½	5½	4	+ 1½
Calm.	½	0	+ ½	0	0	0	0	0	0

The plus sign (+) denotes excesses over averages; the largest numbers affected with this sign in the month of April are opposite to E. and S.; in May to E. and W.; and in June to E. and N.W.

The minus sign (−) denotes deficiencies below averages. In April the largest numbers are opposite to S.E., S.W., and N.; in May to N.E., N., and S.W.; and in June to S.W. and N.E.

From April to May there was an increase of temperature at stations south of 51° of 5°·0, between 51° and 52° of 5°·6, between 52° and 53° of 5°·7, between 53° and 54° of 5°·1, and north of 54° of 3°·5.

From May to June there was an increase of temperature at stations south of 51° of 4°·8, between 51° and 52° of 5°·1, between 52° and 53° of 4°·4, between 53° and 54° of 5°·2, and north of 54° of 6°·3.

The mean reading of the barometer at the height of 159 ft. above the level of the sea for the month of April was 29°743 ins., being 0°004 in. below the average of 45 years, 0°127 in., and 0°098 in., higher than in 1885 and 1884, respectively, and 0°083 in. lower than in 1883.

The mean reading of the barometer for the month of May was 29°758 ins., being 0°030 in. lower than the average of 45 years, 0°130 in. higher than in 1885, 0°066 in. and 0°026 in. lower than in 1884 and 1883 respectively.

The mean reading of the barometer for the month of June was 29°805 ins., being 0°002 in. lower than the average of 45 years, and 0°052 in. lower than in 1885 and 1884 respectively, and 0°012 in. higher than in 1883.

From March to April there was a decrease of pressure at stations south of 51° of 0.034 in., between 51° and 52° of 0.038 in., between 52° and 53° of 0.032 in., between 53° and 54° of 0.140 in., and north of 54° of 0.006 in.

From April to May there was an increase of pressure at stations south of 51° of 0.017 in., between 51° and 52° of 0.017 in., between 52° and 53° of 0.008 in., between 53° and 54° of 0.006 in., and north of 54° a decrease of 0.016 in.

From May to June there was an increase of pressure at stations south of 51° of 0.083 in., between 51° and 52° of 0.069 in., between 52° and 53° of 0.064 in., between 53° and 54° of 0.076 in., and north of 54° of 0.089 in.

About London the barometric pressure was on the first day of April above its average by 0.20 in., the daily deficiency for the ten following days was 0.20 in., from the 12th to the 17th the average daily excess was 0.24 in., for the next three days there was a slight deficiency of 0.08 in., from the 21st to the 26th the average daily excess equalled 0.13 in. then for the three following days, a daily deficiency of 0.13 inch. From April 30th to May 9th there was a mean excess of 0.34 in. from May 10th to the 18th there was a deficiency, being 0.19 in. below the average values, for five days a slight excess, and then five days of a deficiency of atmospheric pressure, and for the last three days in May there being a mean daily excess of 0.06 in. For the first two days in June the readings were low, from the 3rd to the 5th they were higher, the excess averaging 0.16 in.; from June 6th to the 13th there was a deficiency of pressure to the amount of 0.10 in.; the next ten days being alternately five slightly above, and five slightly below their averages; and from June 24th to the end of the quarter there was a mean excess of 0.15 in. daily.

Thunderstorms occurred in April, on the 8th at Leicester; on the 9th at Ventnor, Whitechurch, Oxford, Lowestoft, Somerleyton, and Nottingham; on the 20th at Torquay; on the 24th at Bath Whitechurch, and Oxford; on the 26th at Torquay; on the 27th at Ventnor; and on the 28th at Plymouth, Salisbury, and Bath.

In May on the 12th at Torquay; on the 20th at Wolverhampton; on the 22nd at Blackheath, Barnet, Royston, and Cardington; on the 23rd at Blackheath, Barnet, Royston, Cardington, and Cambridge; on the 27th at Cardington; on the 29th at Burslem and Hull; on the 31st at Ventnor, Osborne, and Wolverhampton.

In June on the 1st at Blackheath, Oxford, Royston, Cardington, Wolverhampton, Leicester, Nottingham, and Burslem; on the 9th at Stonyhurst; on the 19th at Guernsey, Osborne, Southbourne, Salisbury, and Oxford.

Thunder was heard but lightning was not seen in April, on the 2nd at Torquay; on the 8th at Hull; on the 9th at Osborne and Lowestoft; on the 10th at Whitechurch and Carlisle; on the 18th at Cambridge; on the 25th at Guernsey; on the 27th at Llandudno; and on the 28th at Oxford and Hull.

In May on the 19th at Cardington, Cambridge, and Halifax; on the 20th at Whitechurch, Royston, Cardington, and Wolverhampton; on the 23rd at Blackheath and Hull; on the 25th at Hull; on the 29th at Wolverhampton, Nottingham, and Halifax; on the 30th at Wolverhampton, Burslem, Liverpool, Halifax, Hull, Stonyhurst, and Bradford; and on the 31st at Torquay and Wolverhampton.

In June, on the 1st at Cambridge, Wolverhampton, and Hull; on the 2nd at Osborne and Blackheath; on the 3rd at Burslem; on the 9th at Whitechurch, Leicester, Liverpool, Halifax, and Carlisle; on the 13th at Cambridge; on the 19th at Whitechurch, Wolverhampton, and Burslem; and on the 29th at Halifax.

Lightning was seen but thunder was not heard in April, on the 2nd at Guernsey; and on the 27th at Cambridge and Stonyhurst.

In May, on the 5th at Cambridge; on the 7th at Oxford; and on the 31st at Torquay.

In June, on the 1st at Torquay; on the 9th at Liverpool on the 10th at Carlisle; and on the 29th at Cambridge.

Solar halos were seen in April, on the 1st at Torquay and Oxford; on the 3rd at Oxford; on the 5th at Torquay and Oxford; on the 7th at Halifax and Stonyhurst; on the 12th at Stonyhurst; on the 14th at Torquay; on the 17th at Halifax; on the 19th at Osborne and Oxford; on the 20th at Torquay and Oxford; on the 24th at Oxford; on the 25th at Torquay and Oxford; on the 27th at Torquay; and on the 28th at Torquay and Oxford.

In May on the 2nd and 3rd at Torquay and Oxford; on the 4th at Torquay, Oxford, and Halifax; on the 7th at Torquay, Bath, Oxford, and Stonyhurst; on the 11th, 14th, and 15th at Torquay; on the 16th at Halifax; on the 19th at Torquay; on the 21st at Oxford; on the 26th and 30th at Torquay.

In June on the 5th at Torquay, Bath, and Oxford; on the 6th at Torquay; on the 7th at Stonyhurst on the 8th at Oxford; on the 11th, 14th, 15th, 21st, and 26th at Torquay; and on the 27th at Oxford.

Lunar halos were seen in April, on the 11th at Halifax; on the 12th at Burslem, and on the 13th at Guernsey, Halifax, and Stonyhurst.

In May, on the 15th at Torquay, Oxford, and Stonyhurst; on the 16th at Halifax, and on the 18th at Torquay and Oxford.

In June, on the 10th at Torquay.

Aurora Borealis was seen in April, on the 11th at Liverpool.

[Continued on page 71.]

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING JUNE 30TH, 1886.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the seventh edition of his Hygrometrical Tables.

Year 1886.	Month.	Height above Sea Level.	Pressure of Atmosphere in Month.	Temperature of Air in Month.			Mean Tem- perature.		Vapour.		Mean Reading of Thermometer.		Wind.				Mean Amount of Cloud.	Rain. Number of Days it fell.							
				Range.	Mean		Air.	Dew Point.	Elastic Force.	Mean Degree of Humi- dity, 86° = 100.	Maximum in Days of Sun.	Minimum on Grass.	Estimated Breeze.	Relative Proportion of											
					Of all Highest.	Of all Lowest.								Daily Range.	In a cubic foot of Air.	Short of Saturation.			N.	E.	S.	W.

The highest temperatures of the air were at Salisbury, 84° 0'; at Osborne, 83° 1'; at Whitechurch, 81° 8'.

The lowest temperatures of the air were at Barnet, 22° 1'; at Cambridge and Carlisle, 23° 5'.

The greatest ranges of temperature were at Salisbury, 24° 7'; at Cambridge, 21° 8'; at Barnet, 21° 4'.

The least ranges of temperature were at Llandudno and Liverpool, 11° 7'; at Guernsey and Ventnor, 12° 3'.

The greatest number of days of rain were at Nottingham and Burslem, 58; at Liverpool, Hull, and Leeds, 50.

The least number of days of rain were at Somerleyton, 30; at Osborne and Royal Observatory, 36.

The greatest falls of rain were at Stonyhurst, 12.81 inches; at Halifax, 10.38 inches; at Wolverhampton, 10.17 inches.

The least falls of rain were at Somerleyton, 3.92 inches; at Cambridge, 4.66 inches; at Plymouth, 4.72 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

PARALLELS OF LATITUDE, &c.	Mean Pressure of the Air reduced to the level of the sea.														WIND.				Relative Proportion of		Mean Amount of Ozone		Mean Amount of Cloud.		RAIN.

INDEX OF SUPERINTENDENT REGISTRARS' DISTRICTS.

The following Index furnishes a reference to the *Number** of each SUPERINTENDENT REGISTRAR'S DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

Aberayron, 604.	Blean, 58.	Chorlton, 464.	Evesham, 381.	Hinckley, 404.
Abergavenny, 582.	Blofield, 228.	Christchurch, 93.	Exeter, 272.	Hitchin, 133.
Aberystwith, 605.	Blything, 216.	Church Stretton, 346.		Holbeach, 416.
Abingdon, 115.	Bodmin, 294.	Cirencester, 331.		Holbeck, 499.
Alcester, 397.	Bolton, 461.	Cleobury Mortimer, 347.	Falmouth, 298.	Holborn, 13.
Alderbury (Salisbury), 254.	Bootle, 576.	Clitheroe, 473.	Fareham, 90.	Hollingbourn, 51.
Alnwick, 563.	Bosmere, 211.	Clun, 345.	Faringdon, 114.	Holdsworthy, 288.
Alresford, 105.	Boston, 417.	Clutton, 316.	Farnham, 33.	Holyhead, 6306.
Alston, 568.	Bourn, 414.	Cockermouth, 574.	Faversham, 59.	Holywell, 617.
Alton, 106.	Brackley, 156.	Colchester, 196.	Festiniog, 625.	Homton, 270.
Altrincham, 445.	Bradfield, 118.	Congleton, 449.	Flegg, 220.	Hoo, 45.
Alverstoke, 89.	Bradford-on-Avon, 249.	Conway, 629.	Foleshill, 391.	Hornacastle, 421.
Amersham, 140.	Bradford (Yorks), 497.	Cookham, 121.	Forden (Montgomery), 615.	Horsham, 79.
Amesbury, 283.	Braintree, 199.	Corwen, 622.	Fordingbridge, 95.	Houghton-le-Spring, 651.
Amphill, 173.	Bramley, 500.	Cosford, 204.	Forehoe, 226.	Howden, 518.
Andover, 110.	Brampton, 570.	Coventry, 392.	Freebridge Lynn, 236.	Hoxne, 210.
Anglesey, 6302.	Brecknock, 608.	Cranbrook, 62.	Frome, 312.	Huddersfield, 495.
Ashborne, 438.	Brentford, 126.	Crediton, 282.	Fullham, 2.	Hull, 521.
Ashby-de-la-Zouch, 406.	Bridge, 56.	Crickhowell, 609.	Fyde, 477.	Hungerford, 113.
Ashton-under-Lyne, 468.	Bridgend, 589.	Criclade, 242.		Hunslet, 496.
Aston, 387.	Bridgnorth, 348.	Croydon, 38.		Huntingdon, 168.
Atcham (Shrewsbury), 381.	Bridgwater, 307.	Cuckfield, 75.		
Atherstone, 389.	Bridlington, 525.		Gainsborough, 426.	
Auckland, 545.	Bridport, 268.		Garstang, 478.	Ipswich, 213.
Axbridge, 315.	Brighton, 77.	Darlington, 542.	Gateshead, 555.	Ile of Wight, 91.
Axminster, 269.	Bristol, 320.	Dartford, 42.	Glanford Briggs, 425.	Islington, 9.
Aylesbury, 143.	Brixworth, 162.	Daventry, 161.	Glendale, 666.	
Aylsham, 223.	Bromley, 41.	Depwade, 230.	Gloucester, 327.	
Aysgarth, 539.	Bromsgrove, 384.	Derby, 436.	Godstone, 37.	Keighley, 492.
	Bromyard, 341.	Devizes, 247.	Goole, 513.	Kendal, 579.

(OFFICIAL COPY.)

QUARTERLY RETURN OF MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,
AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 151.]

Marriages—April, May, June, 1886.

Births and Deaths—July, August, September, 1886.

[Price 9d.]

General Register Office, Somerset House,
30th October, 1886.

The POPULATION of the UNITED KINGDOM in the middle of 1886 is estimated at 36,707,418 persons; that of England and Wales at 27,870,586, of Scotland at 3,949,393, and of Ireland at 4,887,439.

In the United Kingdom 283,199 *births*, and 159,194 *deaths* were registered in the three months ending 30th September 1886. The natural increase of population was, therefore, 124,005. The registered number of persons married in the quarter ending 30th June 1886 was 120,792.

The birth-rate in the United Kingdom in the third quarter of 1886 was 30·6 and the death-rate 17·2 per 1000. The marriage-rate in the second quarter of 1886 was 13·2 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered in the 2143 registration sub-districts of England and Wales during the quarter ending 30th September 1886; and the MARRIAGES in 14,807 churches or chapels, in 9698 registered places of worship unconnected with the Established Church, and in 632 Superintendent Registrars' Offices, in the three months ending 30th June 1886.

Marriages.

During the three months ending with June last, the marriages of 100,418 persons were registered in England and Wales, corresponding to an annual rate of 14·5 per 1000 of the estimated population in the middle of 1886. This marriage-rate was 0·9 below the mean rate in the corresponding quarters of the ten years 1876-85, and excepting the rates in the second quarters of 1880 and 1883 was lower than the rates recorded in the corresponding quarters of any years since the commencement of civil registration in 1837. The lowest county rates in the second quarter of this year were 10·6 in Hertfordshire, 11·0 in Cambridgeshire, 11·2 in the extra-metropolitan portion of Middlesex, and 11·5 in Norfolk and in

Suffolk. The rates in the other registration counties ranged upwards to 15·8 in Gloucestershire, 15·9 in Devonshire, 16·5 in Northumberland, and 16·7 in Lincolnshire.

Births.

The births registered in England and Wales during the three months ending with September last were 224,029, corresponding to an annual rate of 31·9 per 1000 of the estimated population. This birth-rate was 1·6 below the mean rate in the corresponding quarters of the ten years 1876-85, but was 0·4 above the exceptionally low rate that prevailed in the third quarter of last year. The rate did not exceed 25·8 in Rutlandshire, 26·0 in Herefordshire, 26·9 in Sussex, 27·4 in Wiltshire, and 27·7 in Westmorland and in North Wales; whereas it ranged upwards to 35·7 in Essex and in Monmouthshire, 35·8 in Northumberland, and 36·0 in Durham.

In the twenty-eight great towns the births registered last quarter corresponded to an annual rate of 32·8 per 1000, which was 0·9 above the general English rate. The rate was 31·7 in London, and the mean rate in the twenty-seven provincial towns was 33·7; among the latter it ranged from 26·3 in Brighton, 27·2 in Huddersfield, and 28·9 in Halifax, to 38·4 in Portsmouth, 39·7 in Newcastle-upon-Tyne, 40·9 in Preston, and 42·4 in Cardiff. In fifty other large town districts the mean birth-rate was 33·1, and 0·3 above the rate in the great towns. The lowest rates among these fifty towns were 22·6 in Hastings, 22·7 in Southport, 22·9 in Bath, 23·9 in Cheltenham, and 24·4 in Cambridge; the highest rates were 39·9 in Merthyr Tydfil, 40·7 in St. Helens, 41·1 in South Shields, and 43·9 in Ystradyfodwg.

Movement of the Population.

The natural increase of the population of England and Wales, or the excess of births over deaths, which had been 91,103 and 104,162 in the third quarters of 1884 and 1885, declined again to 98,777 last quarter. It appears from returns issued by the Board of Trade that 106,791 emigrants embarked during last quarter from the various ports of the United Kingdom at which emigration officers are stationed. Distributing 904 whose nationality was undistinguished, and excluding 29,901 foreigners, the emigrants of British origin were 76,890, including 51,405 English, 8507 Scotch, and 16,978 Irish. The numbers of British emigrants in the three preceding corresponding quarters were 90,791, 72,631, and 62,859 respectively. The proportions of emigrants last quarter to a million of the population in the three divisions of the United Kingdom were 1,844 from England, 2,154 from Scotland, and 3,474 from Ireland. Compared with the corresponding quarter of 1885 the proportional amount of emigration showed an increase in each division of the United Kingdom, the rate of increase being smallest in Ireland.

Prices and Pauperism.

The average price of wheat during the three months ending with September last was 31s. 9d., and showed a further increase of but 9d. upon the exceptionally low prices in the two preceding quarters of the year. The mean wholesale prices of beef and of mutton were 5d. and 6½d. per lb. respectively; the mean price of beef showed a decline of ½d., and that of mutton an increase of ¾d., from the prices in the preceding quarter. The average price of the best sea-borne coal in the London market, put in barge from the collier in the Thames, was 14s. 6d. per ton, against prices declining from 16s. 3d. to 14s. 5d. in the three preceding quarters. The mean price of Consols was 101½l., and showed a decline of ½l. from the mean price in the quarter ending with March last. The minimum annual rate of discount charged at the Bank of England, which had been reduced from 3 to 2½ per cent. on 10th June, was raised to 3½ per cent. on 26th August; the average rate during the quarter was 2·9 per cent.

The average number of paupers (exclusive of lunatics in asylums, and vagrants) relieved in England and Wales on the last day of each week in the quarter was 697,629, of whom 168,225 received in-door and 529,404 out-door relief. The proportion of the population in receipt of pauper relief during the three months ending with September was 25·0 per 1000, against 25·6, 25·1, and 24·7 in the three preceding corresponding quarters.

Meteorology.

The remarks upon the Meteorology of the quarter at the Royal Observatory, Greenwich, and at various other stations of observation, furnished by Mr. James Glaisher, F.R.S., with accompanying Tables, will be found on pages 65-72. The mean reading of the barometer at Greenwich was 29·806 inches, and was 0·114 above the mean reading for the corresponding periods of 45 years. The mean temperature of the air during the quarter was 61°·2, and was 1°·5 above the average for the corresponding periods of 115 years. The mean temperature of each of the three months was considerably above the average, the largest excess occurring in September. The first week of July was very fine and warm. From 9th July to 20th August the weather was mostly cold and dull, whereas the remainder of August was fine and warm. It was, generally speaking, very fine throughout the month of September. The excess of the monthly mean temperature was 1°·3 in July, 1°·1 in August, and 2°·1 in September. At 37 stations of observation the mean temperature during the quarter ranged from 56°·3 at Halifax, 56°·5 at Stonyhurst and Wolverhampton, to 61°·2 at Greenwich, 61°·4 at Camden Square, London, and 62·2 at Barnstaple.

The amount of rain measured at Greenwich during the quarter was 4·87 inches, and was 2·46 inches below the average amount in the corresponding periods of 71 years. The rainfall did not exceed the average in either of the three months of the quarter; the greatest deficiency was in August. Rain was measured at Greenwich on 13 days in July, 10 in August, and 10 in September, or on 33 of the 92 days in the quarter. The rainfall recorded at 37 stations of observation ranged from 4·46 inches at Blackheath, and 4·86 at Camden Square, to 9·86 at Carlisle, 12·37 at Stonyhurst, and 16·08 at Lancaster.

The number of hours of bright sunshine recorded during the quarter at the Royal Observatory, Greenwich, was 490·0, which exceeded by 68·1 hours the average amount recorded in the corresponding periods of the nine years 1877-85.

State of the Public Health; Deaths.

During the three months ending with September last 125,252 deaths were registered in England and Wales, corresponding to an annual rate of 17·8 per 1000 of the estimated population. This death-rate was 0·4 below the average rate in the corresponding quarters of the ten years 1876-85, but 1·3 above the low rate in the corresponding period of 1885. The lowest county rates last quarter were 13·2 in Westmorland, 13·5 in Dorsetshire, 13·6 in Cumberland, and 13·7 in Wiltshire and Rutlandshire; the highest were 19·2 in Monmouthshire, 19·8 in Northumberland and in Leicestershire, and 21·0 in Lancashire.

The 125,252 deaths last quarter included 64,839 of males, and 60,413 of females. The annual death-rate among males was 19·0, and among females 16·8 per 1000 estimated to be living of each sex. In equal numbers living the deaths of males were 113 to 100 of females; in the corresponding quarters of 1884 and 1885 the proportions that prevailed were 114 and 112 of males respectively, to 100 of females.

URBAN AND RURAL MORTALITY.—In the registration districts and sub-districts comprising the chief towns (see Table III.) and containing an estimated population of nearly seventeen millions, the death-rate was 19·4 per 1000; in the remaining and chiefly rural population of nearly eleven millions, the rate was 15·4.

These urban and rural rates were respectively 0.5 and 0.2 below the average rates in the ten preceding corresponding quarters. In equal numbers living, the deaths were 126 in the urban to 100 in the rural population, the average proportion in the third quarters of the ten years 1876-85 being 128 to 100.

In the twenty-eight great English towns, including London, and having an estimated population of rather more than nine millions, the registered deaths corresponded to an annual rate of 20.4 per 1000, which was 1.0 above the general urban rate. The death-rate was 18.7 in London, and averaged 21.8 in the twenty-seven provincial towns, among which it ranged from 16.7 in Derby, 17.0 in Bristol and in Brighton, and 17.4 in Huddersfield, to 24.7 in Salford and Portsmouth, 25.0 in Manchester, 28.0 in Norwich, and 28.8 in Preston.

In fifty other large town districts, with an aggregate population estimated at nearly three millions, the mean death-rate was 18.6; it was 0.8 above the general English rate, and 1.8 below the mean rate in the twenty-eight larger towns. The lowest rates among these fifty town districts were 11.0 in Barrow-in-Furness, 12.0 in Darlington, 13.4 in Southampton, and 13.9 in Swansea and in Hastings; the rates in the other towns ranged upwards to 23.9 in St. Helens, 24.8 in York, 26.0 in Ashton-under-Lyne, and 27.1 in Yarmouth.

MORTALITY AT DIFFERENT AGES.—The deaths last quarter included 40,254 of infants under one year of age, 56,305 of persons aged between one and 60 years, and 28,693 of persons aged upwards of 60 years.

Infant mortality, or the proportion of deaths under one year to registered births, was 180 per 1000; in the ten preceding corresponding quarters the mean proportion was 157, and ranged from 115 in 1879 and 138 in 1877, to 191 in 1884 and 195 in 1880. The lowest county rates last quarter were 89 in Westmorland, 90 in Wiltshire and in Dorsetshire, and 96 in Somersetshire; while the highest were 206 in the East Riding, 208 in Warwickshire and the extra-metropolitan portion of Middlesex, 212 in Lancashire, and 243 in Leicestershire.

In the twenty-eight great towns the deaths of infants were in the proportion of 231 to 1000 registered births, and 51 above the general English rate. The rate was 220 in London and 240 in the twenty-seven provincial towns, among which it ranged from 147 in Bristol, 178 in Huddersfield, and 183 in Halifax, to 283 in Salford, 297 in Preston, 346 in Norwich, and 386 in Leicester.

In fifty other large town districts the rate was 195 per 1000 births. The proportion did not exceed 103 in Rochdale, 104 in Barrow-in-Furness, 116 in Carlisle, and 122 in Reading; it ranged upwards in the other towns to 309 in Ashton-under-Lyne, 344 in York, 369 in Yarmouth, and 377 in Lincoln.

Among persons aged between one and 60 years the deaths corresponded to an annual rate of 8.9 per 1000, against an average of 9.8 in the ten preceding third quarters. In the twenty-eight great towns the deaths at these ages corresponded to an annual rate of 10.4, ranging from 8.1 in Brighton, 8.2 in Derby, and 8.4 in Leicester, to 13.0 in Cardiff, 13.1 in Oldham, 14.1 in Manchester, and 14.2 in Preston.

The deaths among persons aged upwards of 60 years were equal to an annual rate of 55.4 per 1000, which was 0.5 above the mean rate in the ten preceding third quarters, in which the rates at this group of ages ranged from 58.3 in 1878 to 52.3 in 1881. The death-rate at these ages in the twenty-eight towns last quarter was 57.1, and was 1.7 above the general English rate. In London the rate was 51.6, whereas it averaged 62.2 in the twenty-seven provincial towns, and ranged from 46.2 in Brighton and 47.1 in Hull, to 77.2 in Halifax, 80.1 in Manchester, and 83.5 in Blackburn.

During last quarter the death-rate of infants was 14.6, and of persons aged upwards of 60 years 0.9 per cent., above the respective rates in the ten preceding corresponding quarters, while the rate among children and adults aged between one and 60 years was 9.2 below the same average.

ZYMOTIC DISEASES.—The 125,252 deaths from all causes included—

15,936	attributed to diarrhoea,
1,995	„ measles,
1,957	„ whooping-cough,
1,480	„ fever,
1,371	„ scarlet fever,
775	„ diphtheria,
21	„ small-pox.

Thus the total number of deaths from these zymotic causes was 23,535, and corresponded to an annual rate of 3·35 per 1000 living, the mean annual rate in the ten preceding third quarters having been 3·42.

The lowest rates from these causes were in Rutlandshire, Cumberland, Westmorland, and North Wales, in none of which was it higher than 1·00; while the highest were in Middlesex (extra-met.), Warwickshire, Leicestershire, Lancashire, and the East Riding, in each of which it was above 4·00.

The rate in the aggregate of the twenty-eight great towns was 4·80, and ranged from 2·17 in Huddersfield, 2·60 in Bristol, and 2·82 in Halifax, to 9·54 in Preston and 9·59 in Norwich. In fifty other considerable towns the rate was 3·82. In the remainder of England and Wales, after abstracting the seventy-eight towns, it was 2·46.

The 15,936 deaths from *diarrhoea* corresponded to an annual rate of 2·27 per 1000, against a mean rate of 1·84 in the ten preceding third quarters. The rate was less than 0·50 in Wiltshire, Dorsetshire, Herefordshire, Shropshire, Rutlandshire, Westmorland, and North Wales, while it was 3·38 in Middlesex (extra-met.), 3·52 in Warwickshire, 3·53 in Leicestershire, and 3·60 in the East Riding. In the aggregate of the twenty-eight great towns the rate was 3·55; ranging from 1·05 in Bristol, 1·40 in Huddersfield, and 1·54 in Halifax, to 5·36 in Salford, 5·49 in Preston, 6·23 in Leicester, and 8·24 in Norwich. In fifty other considerable towns the rate was 2·58, rising, however, to 6·02 in Gateshead, 6·07 in Lincoln, 6·29 in Yarmouth, and 6·48 in York. In the remainder of England and Wales the rate was 1·50. Diarrhoea also showed excessive mortality in Faversham, Margate, Luton, Erdington, Great Grimsby, Runcorn, Farnworth, Burnley, and Dewsbury registration sub-districts. Special Tables dealing with the ratio of mortality from diarrhoea will be found on pp. xiv-xv.

The 1995 deaths from *measles* corresponded to an annual rate of 0·28 per 1000, against a mean rate of 0·28 in the ten preceding third quarters. No death from this disease was registered in Berkshire, Huntingdonshire, or Westmorland, and only 1 in the North Riding; while the rate was 0·53 in Monmouthshire, 0·73 in Cornwall, and 0·85 in Staffordshire. In the aggregate of the twenty-eight great towns the rate was 0·34, ranging from 0·00 in Norwich and Plymouth, to 0·82 in Portsmouth, 0·87 in Blackburn, and 2·38 in Preston. In fifty other considerable towns the rate was 0·40, and was as high as 1·07 in Coventry, 1·34 in Lincoln, 1·67 in St. Helens, 3·30 in Ystradyfodwg, and 4·30 in Walsall. In the remainder of England and Wales it was 0·23. Measles also showed excessive mortality in Illogan, Camborne, Newcastle-under-Lyme, and Tamworth sub-districts.

The 1957 deaths from *whooping-cough* corresponded to an annual rate of 0·28 per 1000, against a mean rate of 0·35 in the ten preceding third quarters. The rate did not exceed 0·15 in Devonshire, Staffordshire, Worcestershire, Warwickshire, Leicestershire, Rutlandshire, North Riding, Cumberland, or Westmorland, while it was 0·51 in Middlesex (extra-met.), 0·55 in Cornwall, 0·65 in Suffolk, 0·71 in Cambridgeshire, and 0·77 in Monmouthshire. In the aggregate of the twenty-eight great towns the rate was 0·28, but, while it did not exceed 0·10 in Plymouth, Birmingham, Leicester, Nottingham, and Huddersfield, it was 0·52 in Manchester, 0·70 in Norwich, and 1·11 in Preston. In fifty other considerable towns the rate was 0·28, rising, however, to 0·87 in St. Helens, 0·90 in Warrington, 1·17 in Yarmouth, 1·46 in Accrington, and 1·57 in Coventry. In the remainder of England and Wales it was also 0·28. This disease caused high death-rates in Soham, Haverhill, and Kenarth sub-districts.

The 1480 deaths from *fever*, including typhus, enteric fever, with simple and ill-defined forms of continued fever, corresponded to an annual rate of 0·21 per 1000, against a mean rate of 0·30 in the ten preceding third quarters. The rate did not exceed 0·10 in Surrey (extra-met.), Berkshire, Buckinghamshire, Bedfordshire, Wiltshire, Somersetshire, Herefordshire, or Rutlandshire, while it was 0·32 in Northumberland, 0·46 in South Wales, and 0·60 in Hampshire. In the aggregate of the twenty-eight great towns the rate was 0·26, but while it was 0·07 in Birmingham, and 0·09 in Sunderland, it was 0·84 in Plymouth, 1·75 in Cardiff, and 2·03 in Portsmouth. In fifty other considerable towns the rate was 0·24, the highest rates being 0·66 in Coventry, 0·68 in Rotherham, and 0·86 in Shrewsbury. In the remainder of England and Wales it was 0·18.

The 1371 deaths from *scarlet-fever* corresponded to an annual rate of 0·20 per 1000, against a mean rate of 0·49 in the ten preceding third quarters. No death from this disease was registered in Huntingdonshire, Herefordshire, or Rutlandshire, and only one each in Buckinghamshire, and Dorsetshire, while in Lancashire the rate was 0·35, in Bedfordshire 0·36, in the West Riding 0·39, and in the North Riding as also in South Wales 0·40. In the aggregate of the twenty-eight great towns the rate was 0·24, but while it did not exceed 0·10 in Plymouth, Wolverhampton, Birmingham, Nottingham, or Halifax, it was 0·40 in Bristol, 0·42 in Liverpool, 0·43 in Sheffield, 0·45 in Huddersfield, 0·47 in Leeds, and 1·18 in Salford. In fifty other considerable towns the rate was 0·24, rising, however, to 1·05 in Ystradlyfodwg, 1·64 in Middlesbrough, and 2·03 in Merthyr Tydfil. In the remainder of England and Wales it was 0·16. The death-rate from this disease was excessive in Colne sub-district.

The 775 deaths ascribed to *diphtheria* corresponded to an annual rate of 0·11 per 1000, which was also the mean rate in the ten preceding third quarters. No death from this disease was registered in Herefordshire or Rutlandshire, and only one each in Oxfordshire and Westmorland; while in Middlesex (extra-met.), the rate was 0·22, in Essex and in Huntingdonshire 0·23, in Buckinghamshire 0·33, and in Hertfordshire 0·39. In the aggregate of the twenty-eight great towns the rate was 0·13, ranging from 0·00 in Blackburn, Preston, Huddersfield, Hull, and Sunderland, to 0·37 in Portsmouth, and 0·31 in Plymouth. In fifty other considerable towns the rate was 0·07. In the remainder of England and Wales it was 0·11. The mortality from this disease was proportionally high in Gazeley and Chipping Sodbury sub-districts.

The deaths from *small-pox* numbered only 21, a smaller number than in any previous quarter on record.

The following Table shows the relative mortality from each of the above-mentioned zymotic diseases in England and Wales, in the twenty-eight great towns, in the fifty other considerable urban districts, and in the remainder of the country:—

ANNUAL DEATH-RATE per 1,000 from several ZYMOTIC DISEASES during the Third Quarter of 1886.

	From Diseases in Cols. 2-8.	Small- pox.	Measles.	Scarlet Fever.	Diph- theria.	Whoop- ing- cough.	Fever.	Diarrhoea.
Cols.	1.	2.	3.	4.	5.	6.	7.	8.

England and Wales, } less the 78 Towns - }	2·46	0·00	0·23	0·16	0·11	0·28	0·18	1·50

CERTIFICATION OF CAUSES OF DEATH.—The causes of 114,512, or 91·5 per cent., of the 125,252 deaths in England and Wales were duly certified by registered medical practitioners, and 6801, or 5·4 per cent., by coroners in inquest cases. The causes of the remaining 3939, or 3·1 per cent., of the deaths were not certified. The proportion of uncertified deaths did not exceed 1·1 per cent. in London, whereas it was 3·5 per cent. in the rest of England and Wales. The per-centage of uncertified deaths was only 0·6 in the extra-metropolitan portion of Middlesex and in Wiltshire, and 1·2 in Sussex and in Berkshire; whereas it ranged upwards in the other English counties to 5·4 in Durham, 5·9 in Cornwall, and 7·5 in Hereford. In Wales 7·4 per cent. of the causes of death were uncertified, the proportions being 7·1 in South Wales, and 8·1 in North Wales.

In the twenty-eight great towns the proportion of uncertified deaths was 2·2 per cent.; while it did not exceed 1·1 per cent. in London, it averaged 3·0 in the twenty-seven provincial towns. The per-centages in these provincial towns ranged from 0·3 in Plymouth, and 0·6 in Portsmouth and in Cardiff, to 4·8 in Liverpool, 5·1 in Sheffield, 6·0 in Oldham and in Huddersfield, and 7·5 in Halifax.

VIOLENT DEATHS.—The deaths referred to different forms of violence were 4377, they corresponded to an annual rate of 0·62 per 1000 of the estimated population, and were equal to 3·5 per cent. of the total deaths, against 3·7 in the ten preceding corresponding quarters. The death-rates from violence ranged from 0·30 in Dorsetshire, 0·37 in Westmorland, and 0·39 in Huntingdonshire, to 0·83 in Northumberland, 0·84 in South Wales, and 0·98 in Monmouthshire.

In the twenty-eight great towns the deaths from violence corresponded to an annual rate of 0·67 per 1000; the lowest rates in these towns were 0·31 in Halifax, and 0·32 in Bolton, while they ranged upwards in the other towns to 0·81 in Birmingham, 0·91 in Bristol, 1·00 in Cardiff, and 1·06 in Newcastle-upon-Tyne.

INQUESTS.—Inquests were held in 6801 cases, or in 5·4 per cent. of the total deaths, which corresponded with the mean proportion in the ten preceding third quarters. In the twenty-eight great towns the proportion of inquest cases to total deaths was 5·8 per cent.; the percentage ranged from 1·5 in Halifax, and 2·3 in Huddersfield, to 8·1 in Plymouth, 8·3 in Bristol, and 8·6 in Birmingham.

DEATHS IN PUBLIC INSTITUTIONS.—The deaths registered in workhouses, hospitals, and public lunatic asylums numbered 12,157, or 9·7 per cent. of the total deaths; the mean proportion in the ten preceding corresponding quarters was 9·4 per cent. In the twenty-eight great towns 6662, or 14·4 per cent., of the deaths were recorded in these public institutions; the per-centage of institution deaths in these towns ranged from 5·2 in Huddersfield, and 5·4 in Leeds, to 15·8 in Bristol, 17·2 in Manchester, and 19·1 in London.

HEALTH OF COLONIAL AND FOREIGN CITIES.

A summary of the Weekly Returns, with which the Registrar-General is favoured by various local authorities abroad, shows that the average annual death-rate during the quarter ending September last in twenty-nine Colonial and Foreign cities, having an aggregate population of more than fifteen millions of persons, was equal to 27·6 per 1000. In the twenty European cities the mean rate was 27·0 per 1000 against 20·4 in the twenty-eight large English towns. Among the twenty-nine Colonial and Foreign cities the lowest death-rates were 17·6 in Geneva, 20·9 in Rotterdam, 21·0 in Philadelphia, and 22·0 in Stockholm; in the other towns the rates ranged upwards to 38·8 in Madras, 50·0 in Cairo, 50·7 in Alexandria, and 56·3 in Trieste. The rate of mortality in Paris was equal to 22·2 per 1000 and exceeded by 3·5 the rate recorded in London; the deaths included 2016 from diarrhoeal diseases, 279 from typhoid fever, 266 from measles, and 221 from diphtheria and croup. Small-pox caused 327 deaths in Buda-Pesth, 42 in St. Petersburg, 29 in Alexandria, 27 in Prague, and 21 in Paris. Measles showed the

highest proportional fatality in Bombay, Paris, The Hague, St. Petersburg, Prague, and Trieste; and scarlet fever was fatally prevalent in St. Petersburg, Hamburg, and Buda-Pesth. The mortality from diphtheria and croup showed, in comparison with the returns for the preceding quarter, an increase in Christiania, Berlin, Hamburg, Buda-Pesth, and Cairo, whereas the deaths referred to these diseases in Paris, St. Petersburg, and Vienna showed a marked decline. The fatal cases of typhoid fever in Paris, which had been 160 in the three months ending June last, rose last quarter to 279, and were equal to an annual rate of 0.50 per 1000, while the death-rate from this disease in London did not exceed 0.17 per 1000. The mortality from diarrhoeal disease was excessive in most of the Continental and American cities; the annual death-rate from these diseases, which averaged 3.5 per 1000 in the twenty-eight large English towns, was last quarter equal to 9.9 in Breslau, 11.2 in Munich, 11.4 in Berlin and in Dresden, 14.0 in Alexandria, and 18.7 in Cairo.

* Furnished by the Chief Cashier of the Bank of England.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which the best seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns with which the Registrar-General has been favoured by Mr. Richard Meade of the Mineral Statistics Department, Home Office.

X.—NORTHERN COUNTIES.									
Darlington - M†	44,006	299	133	27·0	12·0	2·34	127	{ Darlington Sub-district.	
South Shields - M	122,609	1264	603	41·1	19·6	4·71	177	{ Entire District.	
Gateshead - M†	76,448	756	416	39·2	21·6	6·54	246	{ Gateshead Sub-district.	
Tynemouth - M†	49,758	396	267	31·6	21·3	2·71	205	{ North Shields & Tynemouth Sub-districts.	
Carlisle - M†	42,846	346	156	32·0	14·4	1·11	116	{ St. Cuthbert & St. Mary Sub-districts.	
XI.—MONMOUTHSH. & WALES.									
Newport (Monmouth) M†	36,277	340	196	37·2	21·4	5·86	238	{ Newport Sub-district.	
Ystradfydwg - L. G. D.†	52,919†	535	309	43·9	23·2	6·15	198	{ Ystradfydwg Sub-dist. of Pontypridd.	
Merthyr Tydfil - P	89,849	904	528	39·9	23·1	3·62	164	{ Lower and Upper Merthyr Tydfil and Aberdare Sub-districts.	
Swansea - M	94,089	815	329	34·4	13·9	1·43	135	{ Llangafelach, Swansea, and Llan-samlet Sub-districts.	

† The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the column approximately represent, are Municipal or Parliamentary. Imp† D. signifies an Improvement District, and L. G. D. a Local Government District.

§ The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Asylums and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where Workhouse is situated outside that area.

¶ The rate of increase of population in Barrow-in-Furness and in Ystradfydwg was so abnormally large between 1871 and 1881 as to preclude probability of the rate being maintained between 1881 and 1891. The present population of these towns has therefore been estimated from a return of inhabited houses with which the Registrar-General has been favoured by the local authorities.

†† Table VIII of the last Quarterly Return the Annual Rate of Mortality from the principal zymotic diseases in Southport was erroneously given as 1·19, whereas it should have been, as correctly given in Table VII, 0·19 per 1000.

TABLE VIII.—**Annual Death-rate** per 1,000 living from **Diarrhoea** in **ENGLAND**, and in 78 **LARGE TOWNS** during the Third or Summer Quarter of each of the Years 1884, 1885, and 1886.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1881 has been the same as that which prevailed between 1881 and 1881; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London, and the estimates for its component districts have been adjusted to cast to the estimated total. In calculating the rates of mortality, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylum situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring; a similar correction has been made for the deaths registered in the Surrey County Lunatic Asylum situated in the District of Croydon.

TABLE XIII.—**Births and Deaths in the Third Quarter of 1886, in 29 Foreign Cities, having an estimated aggregate Population of 15,193,406 persons.**

^a The Registration or Union Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

^b The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^c See page 14, note b.

NOTE.—The Registrars alone must be considered responsible for the accuracy of the figures shown in their Returns, and for the opinions expressed in the foot notes.

a The Superintendent Registrars' Districts, 652 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

b These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstracts of the Census of 1881. They do not include space occupied by foreshore or tidal water of rivers and creeks. c See page 14, note b.

II.—SOUTH EASTERN COUNTIES.—SUPERINTENDENT REGISTRARS' DISTRICTS.—continued.

Superintendent Registrars' Districts.		Area in Statute Acres.	Enumerated Population, 1881.	Mar- riages	Births	Deaths	The DEATHS in the Quarter are stated by the Registrars to include															
							Registered in Quarter ending 30 June 1886.	Registered in Quarter ending 30 Sept. 1886.	Average in Quarters ending 30 Sept. the 3 Years 1883-85.	Registered in Quarter ending 30 Sept. 1886.	Deaths of										Deaths in Public Institutions.	
											Infants under 1 Year of Age.	Persons aged 60 Years and upwards.	Deaths from									Inquest Cases.
													Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.

* The Registration Sub-districts (2143 in number) are sub-divisions of the Superintendent Registrars' Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; v indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates Hospital or Infirmary; and L Lunatic Asylum.

† For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 2nd October 1886.

I.—LONDON.—REGISTRATION SUB-DISTRICTS—continued.

METEOROLOGY OF ENGLAND.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING SEPTEMBER 30TH, 1886.

By JAMES GLAISHER, Esq., F.R.S., &c.

The weather during the first week in July was very fine and warm, with an almost cloudless sky, the temperature being as high as 90° at Osborne and exceeding 85° at many stations south of latitude 53° , but did not reach much above 80° at northern stations. From the 9th to the end of the month, with the exception of the five days, the 18th to the 22nd, the weather was cold and dull. The atmospheric pressure was variable being mostly above its average till the 11th, and chiefly below afterwards. No rain fell till the 11th day, then it fell nearly on every day till the 26th.

The weather in August was mostly cold and damp, with an overcast sky, till the 20th day, and fine and warm afterwards. The temperature towards the end of the month exceeded 85° at many places between the latitudes 51° and 53° , but not at places either south or north of those parallels, the highest temperature at those stations was below 80° . The atmospheric pressure was below its average during the first two days, then for a week it was above, then variable till the 16th, and mostly above from the 17th. Rain fell occasionally till the 16th, and the weather was fine and dry afterwards.

The weather in September was generally very fine, the temperature on the 1st was high, exceeding 80° at many places in the south and in the Midland counties, but not in Cornwall or Devonshire, or in the north. A great change took place on the second day about London; on the 1st at 5 p.m. the temperature was 83° , and at 5 p.m. on the 2nd it was 56° . The mean temperature of the 1st day was 72° and of the 2nd was 59° , and that of the 3rd was 63° . On the 3rd day a series of thunderstorms and heavy rains set in all over the country and continued through the 4th and 5th days; in some places the falls of rain were very heavy, but local, a good deal of mischief was done by the lightning, and some animals were killed at different parts of the country; the full force of the storm was experienced in Wales. About London thunder was heard on the 4th but there was no storm. The temperature continued high till the 9th day, from the 15th to the 26th the weather was fine but rather cold, and was again warm at the end of the month. The atmospheric pressure was high both at the beginning and ending of the month, and did not differ much from its average at other times. It was a fine harvest month.

About London the mean temperature of the air was for the first week in July above its average by a mean daily value of 7° ; from the 8th to the 17th it was cold, the average daily deficiency of mean temperature was 3° ; from the 18th to the 22nd it was warm, being an excess of temperature of $3\frac{1}{2}^{\circ}$ daily; from July 23rd to August 21st, with the exception of August 6th to 9th which days were a little above their averages, the weather was cold, the average daily deficiency of these temperatures being nearly 3° . On August 22nd a period of fine dry weather with high temperature set in and continued with very slight exception till September 14th, the mean daily excess of temperature over the average was $4\frac{1}{4}^{\circ}$. The three days August 30th to September 1st were very hot, the mean daily excess of temperature of those days was $12\frac{1}{5}^{\circ}$; from September 15th to the 26th was a cold period, the deficiency of temperature averaging 2° daily, and the quarter closed with temperatures slightly above the average.

The mean temperature of the air for July was 63° , being $1^{\circ}\cdot3$ and $0^{\circ}\cdot8$ above the averages of 115 years and 45 years respectively; it was $0^{\circ}\cdot8$ lower than in 1885, $0^{\circ}\cdot4$ lower than in 1884, and $3^{\circ}\cdot1$ higher than in 1883.

The mean temperature of the air for August was 62° , being $1^{\circ}\cdot1$ and $0^{\circ}\cdot6$ above the averages of 115 years, and 45 years respectively; it was $3^{\circ}\cdot5$ higher than in 1885, $3^{\circ}\cdot3$ lower than in 1884, and $0^{\circ}\cdot1$ higher than in 1883.

The mean temperature of the air for September was $58^{\circ}\cdot7$, being $2^{\circ}\cdot1$ and $0^{\circ}\cdot6$ higher than the averages of 115 years and 45 years respectively; it was $3^{\circ}\cdot6$ higher than in 1885, $0^{\circ}\cdot6$ lower than in 1884, and $1^{\circ}\cdot9$ higher than in 1883.

The mean temperature of the quarter was $61^{\circ}\cdot2$, being $1^{\circ}\cdot5$ higher than the average of 115 years, and $0^{\circ}\cdot7$ higher than the average of 45 years.

The mean high day temperature of the air in July was 75° , being $0^{\circ}\cdot8$ above the average of 45 years; in August it was $73^{\circ}\cdot8$, being $0^{\circ}\cdot8$ above the average of 45 years, and in September was $69^{\circ}\cdot2$ being $1^{\circ}\cdot8$ above the average of 45 years.

The mean low night temperature of the air in July was $52^{\circ}\cdot8$, being $0^{\circ}\cdot3$ lower than the average of 45 years; in August it was $53^{\circ}\cdot3$, being $0^{\circ}\cdot2$ above the average of 45 years; and in September was $50^{\circ}\cdot3$, being $1^{\circ}\cdot2$ above the average of 45 years.

Therefore the days were warm throughout the quarter, and the nights were warm in the months of July and September, particularly so in the latter month, and differed but little from their average values in August.

The mean daily range of temperature in July was $22^{\circ}\cdot2$, being $1^{\circ}\cdot2$ greater than the average; in August was $20^{\circ}\cdot5$, being $0^{\circ}\cdot7$ greater than the average; and in September was $18^{\circ}\cdot9$, being $0^{\circ}\cdot7$ greater than the average.

The mean temperature of the air for July was $5^{\circ}\cdot2$ higher than in June; in August it was 1° lower than in July, and in September it was $3^{\circ}\cdot3$ lower than in August.

(From the preceding 45 years' observations the increase of temperature from June to July is $3^{\circ}\cdot3$; the decrease from July to August is $0^{\circ}\cdot8$, and the decrease from August to September is $4^{\circ}\cdot3$.)

NOTE.—In reading this table it will be borne in mind that the plus sign (+) signifies above the average, and the minus sign (−) signifies below the average.

Average duration of the different directions of the wind referred to eight points of the compass, and duration in days of each direction in each month in the quarter, were as follows:—

Direction of Wind.	JULY.			AUGUST.			SEPTEMBER.		
	1886.	Average.	Departure from Average.	1886.	Average.	Departure from Average.	1886.	Average.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.
N.W.	2	3	- 1	7	3	+ 4	2½	4	+ 1½
N	3	4	- 1	1	3	- 2	1½	6	+ 4½
N.E.	0	3½	- 3½	2	3	- 1	8½	2	- 6½
E.	2	2	0	0	1½	- 1½	0	2	+ 2
S.E.	1	1½	- ½	0	1½	- 1½	½	3	- 2½
S.	7	3	+ 4	2	3	- 1	2	8	- 6
S.W.	11	10	+ 1	16	12	+ 4	13	3	- 10
W.	5	4	+ 1	3	4	- 1	2	2	+ 0

The sign (+) denotes excesses over averages; the numbers affected with this sign in July are opposite S., S.W., and W.; in August to N.W. and S.W.; and in September to N.E. and S.W.

The sign (−) denotes deficiencies below averages. In July this sign is opposite to the E. and its compounds; in August also opposite to the E. and compounds; and in September opposite to S., E. and N.

From June to July there was a mean increase of temperature at stations south of latitude 51° of 4°.1; at stations between 51° and 52° of 5°.4; at those between 52° and 53° of 5°.7, and north of this parallel of 4°.7.

From July to August there was a small decrease of mean temperature at stations south of latitude 52°, and at stations north of 52° there was generally a small increase of temperature.

From August to September there was a decrease of temperature at all stations of about 3°.

The mean reading of the barometer at the height of 159 ft. above the level of the sea for the month of July was 29.747 ins., being 0.051 in. below the average of 45 years, 0.249 in. lower than in 1885, 0.033 in. lower than in 1884, and 0.059 in. higher than in 1883.

The mean reading of the barometer for the month of August was 29.816 ins., being 0.033 in. above the average of 45 years, 0.020 in. higher than in 1885, 0.019 in. lower than in 1884, and 0.025 in. lower than in 1883.

The mean reading of the barometer for the month of September was 29.856 ins., being 0.059 in. above the average of 45 years, and 0.143 in. higher than in 1885, 0.021 in. higher than in 1884, and 0.208 in. higher than in 1883.

From June to July there was a decrease of atmospheric pressure at stations south of latitude 52° of 0.067 in. between latitudes 52° and 53° of 0.076 in., and north of this parallel of 0.111 in.

From July to August there was an increase at all stations, at those south of 51° of 0.036 in., and north of 51° of 0.080 in.

From August to September there was an increase of 0.008 in. at stations south of 51° , of 0.027 in. at stations situated between latitudes 51° and 52° , and of 0.043 in. at stations north of 52° .

About London the barometric pressure was above average till the 11th day of July, with the exception of the 7th and 8th, which were slightly below; the average daily excess of these 11 days was 0.16 in. From the 12th to August 2nd, the barometer reading was mostly below its average, the mean daily deficiency of pressure for these 22 days was 0.16 in.; from August 3rd to 9th there was a mean daily excess of pressure of 0.11 in. From the 10th to the 16th the pressure was variable. On the 10th it was 0.21 in. below the average, on the 11th and 12th was slightly above, on the 13th it was 0.36 in. below, on the 15th it was 0.18 in. above, and on the 16th was again below. From August 17th to September 3rd, the pressure was generally above the average, the mean daily excess of these 18 days was 0.072 in. From the 4th to the 12th of September there was a mean daily deficiency of 0.1 in., from the 13th to the 19th there was a mean daily excess of 0.16 in., there was a deficiency on the 20th, 21st, and 22nd, averaging 0.19 in. daily, and from the 23rd to the end of the month, the pressure was steady, in excess of the average by 0.18 in. daily.

Thunderstorms occurred in July, on the 19th at Guernsey and in the Midland and Northern Counties; on the 21st a little north of London and in the Midland and Northern Counties; on the 25th at Oxford, Cardington, Rugby, Nottingham, Halifax, Stonyhurst, and Bradford; on the 26th at Whitechurch, Halifax, and Hull; on the 30th at Guernsey; on the 31st at Cardington and Cambridge.

In August, on the 1st at Guernsey; on the 10th at Burslem; on the 13th at Royston, Cardington, and Nottingham; on the 16th at Royston.

In September, on the 3rd at Torquay, and Osborne; on the 4th at many places in the Western, Midland, and Northern Counties; and on the 5th at Bath.

Thunder was heard but lightning was not seen in July, on the 21st at Cambridge; on the 24th at Rugby; on the 25th at Plymouth, Torquay, Blackheath, and Cambridge; on the 26th at Rugby and Wolverhampton; on the 27th at Rugby; on the 31st at London, Barnet, and Hull.

In August, on the 5th at Carlisle; on the 13th at Rugby, Burslem, Halifax, and Stonyhurst; on the 16th at Cardington; on the 17th at Royston, Cambridge, and Lowestoft; and on the 18th and 19th at Halifax.

In September, on the 4th at Blackheath, Greenwich, and Cardington; and on the 5th at Halifax.

Lightning was seen but thunder was not heard in July, on the 21st at Carlisle.

In August, on the 17th at Royston and Cambridge; on the 23rd at Torquay; on the 24th at Hull.

In September, on the 1st at Greenwich and Lowestoft; on the 2nd at Cambridge; on the 3rd at Salisbury and Cardington; on the 4th at Oxford, Cardington, Lowestoft, Nottingham, Halifax, and Hull; on the 13th at Halifax; on the 18th at Torquay; and on the 27th at Hull.

Solar halos were seen in July, on the 8th at Torquay; on the 18th, the 20th, and 21st at Oxford; on the 28th at Halifax and Bradford; and on the 30th at Torquay.

In August on the 3rd at Torquay and Oxford; on the 5th at Torquay; on the 12th at Oxford and Halifax; on the 14th at Torquay and Halifax; on the 19th at Torquay; and on the 20th at Halifax.

In September on the 2nd at Halifax; on the 8th and 22nd at Oxford; and on the 28th at Torquay.

Lunar halos were not seen on any night in July and August.

In September they were seen on the 10th at Torquay and Halifax; and on the 11th at Torquay.

Aurora Borealis was seen in July, on the 27th at Torquay.

Hail fell in July, on the 25th at Oxford and Nottingham; and on the 31st at Royston.

In August on the 19th, 20th, 21st, 22nd, 24th, and 28th at Cambridge.

In September on the 5th at Wolverhampton.

Fog prevailed in July, on the 5th at Lowestoft; on the 8th at Cambridge; on the 13th and 15th at Guernsey; and on the 23rd and 25th at Torquay.

In August on the 1st and 5th at Torquay; on the 6th at Guernsey and Torquay; on the 7th at Guernsey; on the 9th at Guernsey and Torquay; on the 19th at Guernsey, Bath, and Stonyhurst; on the 20th at Royston and Hull; on the 21st at Guernsey, Bath, and Oxford; on the 22nd at Bath and Royston; on the 23rd at Wolverhampton; on the 24th at Bath, Lowestoft, Somersleyton, Wolverhampton, Hull, and Stonyhurst; on the 27th and 28th at Guernsey; on the 30th at Guernsey and Bath; and on the 31st at Guernsey.

In September on the 3rd at Torquay and Bath; on the 4th at Torquay, Bath, Cambridge, and Wolverhampton; on the 10th at Cambridge; on the 12th at Torquay and Bath; on the 14th at Bath and Oxford; on the 17th, 19th, 20th, and 21st at Bath; and on the 26th at Oxford.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING SEPTEMBER 30th, 1886.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the seventh edition of his Hygrometrical Tables.

Year 1886.	Month.	Pressure of Atmosphere in Month.		Temperature of Air in Month.				Mean Tem- perature.		Vapour.		Mean Reading of Thermometer.		Mean Amount of Cloud.		Rain.							
		Mean.	Range.	Of all Highest.	Of all Lowest.	Mean.	Daily Range.	Air.	Dew Point.	Elastic Force.	In a cubic foot of Air.	Mean Degree of Humi- dity, Sat., = 100.	Mean Weight of a cubic foot of Air.	Maximum in Kays of Sun.	Minimum on Grass.	Estimated. Strength.	Relative Proportion of		Mean Amount of Ozone.	Mean Amount of Ozone.	Number of Days fell.	Amount col- lected.

The highest temperatures of the air were at Osborne, $90^{\circ} \cdot 2$; Royal Observatory, $89^{\circ} \cdot 8$; and Cardington, $89^{\circ} \cdot 2$.

The lowest temperatures of the air were at Carlisle, $29^{\circ}2$; Salisbury, $34^{\circ}0$; and Wolverhampton, $31^{\circ}4$.

The greatest ranges of temperature were at Salisbury, $55^{\circ}0$; Cardington, $52^{\circ}2$; and Carlisle, $50^{\circ}4$.

The least ranges of temperature were at Guernsey, 31°C ; Barnstaple and Llandudno, 35°C .

The greatest number of days of rain were at Lancaster, 52; Nottingham, 47; and Bradford and Stonyhurst, 46.

The least number of days of rain were at Blackheath and Barnet, 28; Whitechurch and Royston, 29.

The greatest falls of rain were at Lancaster, 16·08 inches; Stonyhurst, 12·37 inches; and Carlisle, 9·86 inches.

The least falls of rain were at Blackheath, 4·46 inches; Camden Square, 4·86 inches; Royal Observatory and Barnet, 4·87 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

PARALLELS OF LATITUDE, &c.		Mean Pressure of dry Air reduced to the level of the sea.	Mean of all Highest Readings of the Thermometer.	Mean of all Lowest Readings of the Thermometer.	Mean Range of Temperature in the Quickest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Air, below the level of the Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Mean Estimated Strength.	WIND.			Mean Amount of Ozone.	RAIN.					
																		Relative Proportion of				Mean Number of Days it fell.	Mean Annual

INDEX OF SUPERINTENDENT REGISTRARS' DISTRICTS.

The following Index furnishes a reference to the *Number** of each SUPERINTENDENT REGISTRAR'S DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

Aberraton, 604.	Blean, 58.	Choriton, 464.	Evesham, 381.	Hinckley, 404.
Abergavenny, 682.	Blodfeld, 228.	Christchurch, 83.	Exeter, 272.	Hitchin, 133.
Aberystwith, 605.	Blything, 216.	Church Stretton, 346.		Holbeach, 416.
Abingdon, 115.	Bodmin, 294.	Cirencester, 331.		Holbeck, 497.
Acester, 397.	Bolton, 461.	Cleobury Mortimer, 347.	Falmouth, 298.	Holborn, 13.
Acisbury (Salisbury), 254.	Boole, 576.	Clitheroe, 473.	Fareham, 90.	Hollingbourn, 51.
Adwick, 563.	Bosmere, 211.	Clun, 345.	Faringdon, 114.	Holsworthy, 288.
Adresford, 105.	Boston, 417.	Clutton, 316.	Farnham, 33.	Holyhead, 630b.
Adon, 568.	Bourn, 414.	Cockermouth, 574.	Faversham, 59.	Holywell, 617.
Adon, 106.	Brackley, 156.	Colchester, 186.	Festiniog, 625.	Honiton, 370.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office

AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 152.] **Marriages**—*July, August, September, 1886.* [Price 9d.
Births and Deaths—*October, November, December, 1886.*

*General Register Office, Somerset House,
31st January, 1887.*

The POPULATION of the UNITED KINGDOM in the middle of 1886 is estimated at 36,707,418 persons; that of England and Wales at 27,870,586, of Scotland at 3,949,393, and of Ireland at 4,887,439.

In the United Kingdom 275,099 *births*, and 167,574 *deaths* were registered in the three months ending 31st December 1886. The natural increase of population was, therefore, 107,525. The registered number of persons married in the quarter ending 30th September 1886 was 117,344.

The birth-rate in the United Kingdom in the fourth quarter of 1886 was 29·7 and the death-rate 18·1 per 1000. The marriage-rate in the third quarter of 1886 was 12·7 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered in the 2143 registration sub-districts of England and Wales during the quarter ending 31st December 1886; and the MARRIAGES in 14,818 churches or chapels, in 9737 registered places of worship unconnected with the Established Church, and in 632 Superintendent Registrars' Offices, in the three months ending 30th September 1886.

Marriages.

During the three months ending with September last, the marriages of 97,952 persons were registered in England and Wales, corresponding to an annual rate of 13·8 per 1000 of the estimated population in the middle of 1886. This marriage-rate was 1·2 below the mean rate in the corresponding quarters of the ten years 1876–85, and was lower than the rate recorded in the third quarter of any year since 1842. The lowest rates in the third quarter of 1886 were 9·1 in North Wales, 9·8 in Suffolk, 10·3 in Berkshire, and 10·4 in Hertfordshire and in Shropshire. The rates in the other registration counties ranged upwards to 14·6 in Hampshire, 14·8 in Devonshire, in Bedfordshire, and in Northumberland, 15·0 in Huntingdonshire, and 15·3 in Lancashire.

Births.

The births registered in England and Wales during the three months ending with December last were 217,592, and corresponded to an annual rate of 31·0 per 1000 of the estimated population. This birth-rate was 2·4 below the mean rate in the corresponding quarters of the ten years 1876-85, and was lower than the rate recorded in the fourth quarter of any year since 1853. The rate did not exceed 24·2 in North Wales, 25·6 in Sussex, 26·0 in Huntingdonshire, and 27·1 in Shropshire and in Westmorland; in the other registration counties it ranged upwards to 34·2 in Staffordshire, 34·5 in Durham, 34·6 in Monmouthshire, 34·7 in Northumberland, and 36·4 in Essex.

In the twenty-eight great towns the births registered last quarter corresponded to an annual rate of 32·1, and was 1·1 above the general English rate. The rate was 31·4 in London, while the mean rate in the twenty-seven provincial towns was 32·6; among the latter it ranged from 24·8 in Brighton, 26·8 in Halifax, 27·3 in Bradford, and 29·4 in Bristol, to 37·3 in Preston, 38·2 in Newcastle-upon-Tyne, and 41·5 in Cardiff. In fifty other large town districts the mean birth-rate was 32·0, and 0·6 below the rate in the great towns. The lowest rates among these fifty towns were 21·4 in Hastings, 22·0 in Bath, 23·0 in Southport, and 24·0 in Cheltenham; the highest rates were 38·2 in Ystradyfodwg, 39·0 in Wigan, and 43·2 in Newport (Mon.).

Movement of the Population.

The natural increase of the population of England and Wales, or the excess of births over deaths, which had been 89,049 and 92,234 in the fourth quarters of 1884 and 1885, declined last quarter to 87,846. It appears from returns issued by the Board of Trade that 62,941 emigrants embarked during last quarter from the various ports of the United Kingdom at which emigration officers are stationed. Distributing 1438 whose nationality was undistinguished, and excluding 16,951 foreigners, the emigrants of British origin were 45,990, including 32,092 English, 5240 Scotch, and 8658 Irish. The numbers of British emigrants in the three preceding corresponding quarters were 52,805, 42,854, and 40,490 respectively. The proportions of emigrants last quarter to a million of the estimated population in the three divisions of the United Kingdom were 1151 from England, 1327 from Scotland, and 1771 from Ireland. Compared with the corresponding quarter of 1885 the proportional amount of emigration showed a small increase in each division of the United Kingdom, although it was in each case lower than the proportions in the fourth quarter of 1883.

Prices and Pauperism.

The average price of wheat during the three months ending with December last was 31s. 4d., and was 5d. below the average price in the preceding quarter. The mean wholesale prices of beef and of mutton were 4½d. and 5⅔d. per lb. respectively; the mean price of beef showed a decline of ⅔d., and that of mutton a decline of ¼d., from the prices in the preceding quarter. The average price of the best sea-borne coal in the London market, put in barge from the collier in the Thames, was 15s. 0d. per ton, against 15s. 9d., 14s. 5d., and 14s. 6d. in the three preceding quarters of the year. The mean price of Consols was 101l., showing a slight decline from the mean price in the preceding quarter. The minimum annual rate of discount charged at the Bank of England, which had been raised to 3½ per cent. on 26th August, was further raised to 4 per cent. on 21st October, and to 5 per cent. on 16th December; the average rate during the quarter was 4·06 per cent.

The average number of paupers (exclusive of lunatics in asylums, and vagrants) relieved in England and Wales on the last day of each week in the quarter was 719,452, of whom 183,226 received in-door and 536,226 out-door relief. The proportion of the population in receipt of pauper relief during the three months ending with December was 25·8 per 1000, against 25·8 and 25·9 in the two preceding corresponding quarters.

Meteorology.

The remarks upon the Meteorology of the quarter at the Royal Observatory, Greenwich, and at various other stations of observation, furnished by Mr. James Glaisher, F.R.S., with accompanying Tables, will be found on pages 65-72. The mean reading of the barometer at Greenwich was 29·624 inches, and was 0·125 below the mean reading for the corresponding periods of 45 years. The mean temperature of the air during the quarter was 44°·6, and was 0°·9 above the average for the corresponding periods of 115 years. The mean temperature was considerably above the average in October and November, whereas it fell below the average in December. The temperature of October was higher than that of the corresponding month of any year since 1861; the weather in November was generally unsettled, and in the latter part of the month was foggy, cloudy, and dull; excepting a warm period between the 6th and the 15th, the temperature in December was considerably below the average. At 33 other stations of observation the mean temperature during the quarter ranged from 41°·6 in Halifax and 42°·1 in Wolverhampton to 48°·2 in Barnstable, 48°·8 in Ventnor, and 49°·2 in Guernsey.

The amount of rain or melted snow measured at Greenwich during the quarter was 8·03 inches, and was 0·91 of an inch above the average amount in the corresponding periods of 71 years. The rainfall was considerably below the average in October, whereas it showed a marked excess both in November and in December. Rain was measured at Greenwich on 14 days in October, 15 in November, and 18 in December; or on 47 of the 92 days in the quarter. The rainfall recorded at 33 other stations of observation ranged from 8·38 inches at Blackheath and 8·47 inches at Lowestoft, to 18·31 inches at Guernsey, 19·27 inches at Bath, and 19·67 inches at Barnstable.

The number of hours of bright sunshine recorded during the quarter at the Royal Observatory, Greenwich, was 108·2, and was 35·8 below the average amount recorded in the corresponding periods of the nine years 1877-85.

State of the Public Health; Deaths.

During the three months ending with December last 129,746 deaths were registered in England and Wales, corresponding to an annual rate of 18·5 per 1000 of the estimated population. This death-rate was 1·4 below the mean rate in the corresponding quarters of the ten years 1876-85, and corresponded with the rate in the fourth quarter of 1885, which was lower than that recorded in the corresponding period of any year since the commencement of civil registration in 1837. The lowest county rates last quarter were 13·5 in Westmorland and in Rutlandshire, 14·1 in Sussex, 14·5 in Surrey (extra-Metropolitan), and 15·2 in Dorsetshire; the highest rates were 19·9 in the West Riding, 20·0 in the East Riding, 21·8 in Lancashire, 22·6 in Monmouthshire, and 22·9 in Cornwall.

The 129,746 deaths last quarter included 66,500 of males, and 63,246 of females. The annual death-rate among males was 19·5, and among females 17·5 per 1000 estimated to be living of each sex. In equal numbers living the deaths of males were 111 to 100 females; in the corresponding quarters of 1884 and 1885 the proportions that prevailed were respectively 108 and 110 of males, to 100 of females.

URBAN AND RURAL MORTALITY.—In the registration districts and sub-districts comprising the chief towns (see Table III.) and containing an estimated population of nearly seventeen millions, the death-rate was 19·7 per 1000; in the remaining and chiefly rural population of nearly eleven millions, the rate was 16·5. These urban and rural rates were respectively 2·0 and 0·9 below the mean rates in the ten preceding corresponding quarters. In equal numbers living, the deaths were 119 in the urban to 100 in the rural population, the average proportion in the third quarters of the ten years 1876-85 being 125 to 100.

In the twenty-eight great English towns, including London, and having an estimated population of rather more than nine millions, the registered deaths corre-

sponded to an annual rate of 20·3 per 1000, which was 0·6 above the general urban rate. The death-rate was 18·8 in London, and averaged 21·6 in the twenty-seven provincial towns, among which it ranged from 14·9 in Brighton, 16·6 in Birkenhead, 17·4 in Derby, and 17·7 in Birmingham, to 25·7 in Manchester, 27·2 in Wolverhampton, and 28·2 in Preston.

In fifty other large town districts, with an aggregate population estimated at nearly three millions, the mean death-rate was 19·5; it was 0·2 below the general urban rate, and 0·8 below the mean rate in the twenty-eight larger towns. The lowest rates among these fifty town districts were 11·6 in Burton-on-Trent, 13·5 in Barrow-in-Furness, 14·6 in Hastings, and 15·0 in Gloucester; the rates in the other towns ranged upwards to 24·3 in Wigan and in Merthyr Tydfil, 24·5 in Dudley, and 27·6 in Newport (Mon.).

MORTALITY AT DIFFERENT AGES.—The deaths last quarter included 32,005 of infants under one year of age, 62,596 of persons aged between one and 60 years, and 35,145 of persons aged upwards of 60 years.

Infant mortality, or the proportion of deaths under one year to registered births, was 147 per 1000; in the ten preceding corresponding quarters the mean proportion was 141, and ranged from 148 in 1878, to 129 in 1881. The lowest county rates last quarter were 64 in Westmorland, 83 in Rutlandshire, 84 in Huntingdonshire, and 97 in Dorsetshire; while the highest rates were 171 in Monmouthshire, 175 in Leicestershire, 178 in Lancashire, and 185 in Cornwall.

In the twenty-eight great towns the deaths of infants were in the proportion of 160 to 1000 registered births, and 13 above the general English rate. The rate was 144 in London and 173 in the twenty-seven provincial towns, among which it ranged from 129 and 139 in Birkenhead and Derby, to 207 in Oldham, Wolverhampton, and Halifax, 208 in Blackburn, and 237 in Preston. In fifty other large town districts the rate was 169 per 1000 births, and 9 above the rate in the largest towns. The proportion did not exceed 92 in Burton-upon-Trent, and 107 in Chatham; it ranged upwards, however, to 217 in Stockport and Worcester, 223 in Ashton-under-Lyne, 231 in Dudley, and 248 in Newport (Mon.).

Among persons aged between one and 60 years the deaths corresponded to an annual rate of 9·9 per 1000, against an average of 11·2 in the ten preceding third quarters. In the twenty-eight great towns the deaths at these ages corresponded to an annual rate of 11·9, ranging from 7·1 in Brighton and 8·7 in Derby, to 16·1 in Liverpool, 16·2 in Preston, 16·3 in Manchester and Halifax, and 17·1 in Wolverhampton.

The deaths among persons aged upwards of 60 years were equal to an annual rate of 67·8 per 1000, which was 2·4 below the mean rate in the ten preceding fourth quarters. In the twenty-eight great towns the mean death-rate at these ages was 74·1, and 6·3 above the general English rate. In London the rate was 71·8, while the mean rate in the twenty-seven provincial towns was 76·1; it ranged from 57·1 in Brighton, and 63·4 in Sunderland, to 88·8 in Oldham, 94·1 in Blackburn, and 99·4 in Bolton.

During last quarter the death-rate of infants was 4·3 per cent. above, while that of persons aged between one and 60 years was 11·6, and that of persons aged upwards of 60 years 3·4 per cent. below the respective mean rates in the ten preceding corresponding quarters.

ZYMOTIC DISEASES.—The 129,746 deaths from all causes included—

4386	attributed to diarrhœa,
3444	" measles,
2305	" scarlet fever,
2050	" fever,
1797	" whooping-cough,
1216	" diphtheria,
11	" small-pox.

Thus the total number of deaths ascribed to these zymotic causes was 15,209, and corresponded to an annual rate of 2·17 per 1000 living, the average annual rate in the ten preceding fourth quarters having been 2·49.

The lowest rates from these diseases were in Westmorland, Rutlandshire, Herefordshire, and Wiltshire, in none of which did it exceed 1·00; while the highest were in Monmouthshire, Lancashire, West Riding, and Cornwall, in each of which the rate exceeded 3·00. In the aggregate of the twenty-eight great towns the rate was 2·51, but ranged from 1·21 in Brighton to 5·27 in Leeds, 5·33 in Halifax, and 7·37 in Wolverhampton. In fifty other considerable towns the rate was 2·64, while in the remainder of England and Wales it was 1·88.

The 4,386 deaths from *diarrhœa* corresponded to an annual rate of 0·63 per 1000, against a mean rate of 0·44 in the ten preceding fourth quarters. The rate was higher than in any one of these ten quarters with the single exception of the fourth quarter of 1880, when it was 0·70. This excess of mortality from diarrhœa was doubtlessly attributable to the unusually warm weather in October, the mean temperature in which month, as recorded at Greenwich, was 53·3° F., while the average for that month in 100 years is only 49·6° F.

The lowest rates in the registration counties were 0·12 in Westmorland, 0·17 in Rutlandshire, 0·25 in Wiltshire, and 0·28 in North Wales, while the highest were 0·90 in Norfolk, 0·94 in Durham, 0·99 in the East Riding, and 1·06 in Staffordshire. In the aggregate of the twenty-eight great towns the rate was 0·61; ranging from 0·27 in Huddersfield and 0·32 in Plymouth, to 1·58 in Preston and 1·65 in Wolverhampton. In fifty other considerable towns the rate was 0·84, rising, however, to 1·40 in Northampton, 1·81 in Walsall, and 2·15 in Colchester. In the remainder of England and Wales the rate was 0·59.

The 3444 deaths from *measles* corresponded to an annual rate of 0·49 per 1000, against an average of 0·41 in the ten preceding fourth quarters. Twice only in those ten quarters, namely in 1879 and in 1885, had the rate been so high as in 1886.

No death from this disease was registered in Bedfordshire, Rutlandshire, or Westmorland, and only 1 each in Herefordshire and Huntingdonshire; while the rate was 1·05 in West Riding, 1·18 in Staffordshire, and 1·52 in Cornwall. In the aggregate of the twenty-eight great towns the rate was 0·66, ranging from 0·00 in Brighton, Norwich, Plymouth, Derby, and Birkenhead, to 2·59 in Leeds, 3·85 in Halifax, and 5·12 in Wolverhampton. In fifty other considerable towns the rate was 0·59, rising, however, to 2·01 in West Bromwich, 2·18 in Walsall, 2·89 in Coventry, 3·71 in St. Helens, and 4·75 in Dudley. In the remainder of England and Wales the rate was 0·38, and showed a marked excess in the sub-districts of Saffron Walden and Newport, Hartest, Redruth, Penzance and St. Just-in-Penwith, Gresley, Bromsgrove, Atherstone, Barrow-upon-Soar, Newton (near Manchester), Burnley, Hebden Bridge, Penistone, Wath, and Aberford.

The 2305 deaths from *scarlet-fever* corresponded to an annual rate of 0·33 per 1000, against an average of 0·70 in the ten preceding fourth quarters. Once only in these ten quarters, viz., in 1885, had the rate been so low as in 1886.

No death from this disease was recorded either in Herefordshire or Westmorland, and while the rate did not exceed 0·05 in Kent (extra-Met.), Suffolk, Wiltshire, and Staffordshire, it was 0·59 in North Riding, Monmouthshire, and South Wales, 0·60 in Gloucestershire, 0·62 in West Riding, and 0·64 in Lancashire. In the twenty-eight great towns the rate was 0·45, ranging from 0·05 in Wolverhampton, and 0·09 in Portsmouth, Birmingham, and Derby, to 1·04 in Bristol, 1·05 in Liverpool, and 1·29 in Salford. In fifty other considerable towns the rate was 0·38, being, however, as high as 2·23 in Middlesbrough. In the remainder of England and Wales it was 0·25; the disease showed fatal prevalence in Bedford and Kempston, Newchurch, Oswaldtwistle, and Barnsley sub-districts.

The 2050 deaths from *fever*, including typhus, enteric fever, with simple and ill-defined forms of continued fever, corresponded to an annual rate of 0·29 per 1000, against an average of 0·37 in the ten preceding fourth quarters.

While the rate did not exceed 0·10 in Surrey (extra-Met.), Bucks, Somersetshire, Herefordshire, and Rutlandshire, it was 0·40 or more in Northamptonshire, Huntingdonshire, Dorsetshire, East and West Ridings, Monmouthshire, and South Wales. The rate for the twenty-eight great towns was 0·31, ranging from 0·08 in Birkenhead, 0·13 in Bristol and in Hull, and 0·14 in Brighton, to 0·88 in Portsmouth, 0·89 in Plymouth, and 1·07 in Preston. In fifty other considerable towns the rate was 0·41, rising, however, to 1·11 in York, 1·14 in Swansea, and 1·77 in Rotherham. In the remainder of England and Wales the rate was 0·26. Fever showed excessive mortality in Watford, Ramsey, Prittlewell and Great Wakering, Swanage, Portland, Barnoldswick, and Mynyddyslwyn sub-districts.

The 1797 deaths from *whooping-cough* corresponded to an annual rate of 0·26 per 1000, against a mean of 0·36 in the ten preceding fourth quarters. Only once in these ten quarters, namely in 1876, had the rate been so low as in 1886.

No death from this disease was recorded in the small counties of Huntingdon, Rutland, and Westmorland, while the rate was 0·74 in Buckinghamshire and in Monmouthshire, and 1·02 in Cornwall. The rate in the twenty-eight great towns was 0·28, ranging from 0·00 in Brighton, and 0·03 in Portsmouth and Blackburn, to 0·74 in Oldham, 0·75 in Preston, 0·78 in Hull, and 0·86 in Huddersfield. In fifty other considerable towns the rate was 0·30, rising, however, to 1·09 in Newport and 1·24 in South Shields. In the remainder of England and Wales the rate was 0·24; the disease was exceptionally fatal in High Wycombe, Peterborough, Redruth, Cardigan, and Upper Llanidloes sub-districts.

The 1216 deaths from *diphtheria* corresponded to an annual rate of 0·17 per 1000, against an average of 0·15 in the ten preceding fourth quarters.

No death from this disease was registered in Herefordshire, Rutlandshire, East Riding, or Westmorland; while the rate was 0·43 in Surrey (extra-Met.) and Hampshire, and 0·44 in Cambridgeshire. The rate in the twenty-eight great towns was 0·20, ranging from 0·00 in Blackburn and Hull, to 0·36 in Halifax, 0·39 in Norwich, and 0·94 in Portsmouth. In fifty other considerable towns the rate was 0·12; while in the rest of England and Wales it was 0·16; the disease showed fatal prevalence in Frimley, Titchfield, Fulbourn, Buckfastleigh, Saltash, Newton (near Bath), and Blackwell sub-districts.

The deaths from *small-pox* were only 11, and fewer than in any previous quarter on record.

The following Table shows the relative mortality from each of the above-mentioned zymotic diseases in England and Wales, in the twenty-eight great towns, in the fifty other considerable urban districts, and in the remainder of the country:—

ANNUAL DEATH-RATE per 1,000 from several ZYMOTIC DISEASES during the Fourth Quarter of 1886.

	From Diseases in Cols. 2-8.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.
Cols.	1.	2.	3.	4.	5.	6.	7.	8.

28 Great Towns -	2·51	0·00	0·66	0·45	0·20	0·28	0·81	0·61
50 other Town Districts	2·64	0·00	0·59	0·38	0·12	0·30	0·41	0·84
England and Wales, } less the 28 Towns - }	1·88	0·00	0·38	0·25	0·16	0·24	0·26	0·59

CERTIFICATION OF CAUSES OF DEATH.—The causes of 118,004, or 90·9 per cent., of the 129,746 deaths in England and Wales were duly certified by registered medical practitioners, and 7134, or 5·5 per cent., by coroners in inquest cases. The causes of the remaining 4608, or 3·6 per cent., of the deaths were not certified. The proportion of uncertified deaths did not exceed 1·2 per cent. in London, whereas it was 4·0 per cent. in the rest of England and Wales. The per-centage of uncertified deaths was only 0·9 in the extra-metropolitan part of Middlesex and in Wiltshire, while it ranged upwards to 5·8 in Durham, 6·4 in Cornwall, and 7·0 in Herefordshire. In Wales 8·7 per cent. of the causes of death were uncertified, the proportions being 9·4 in North Wales and 8·4 in South Wales.

In the twenty-eight great towns the proportion of uncertified deaths was 2·5 per cent.; but while it did not exceed 1·2 per cent. in London, it averaged 3·4 in the twenty-seven provincial towns. The per-centages in these provincial towns ranged from 0·7 in Plymouth and 1·2 in Bristol, to 6·4 in Sheffield, 6·8 in Oldham, and 9·0 in Halifax.

VIOLENT DEATHS.—The deaths referred to different forms of violence were 3995, and corresponded to an annual rate of 0·57 per 1000 of the estimated population, they were equal to 3·1 per cent. of the total deaths, against 3·3, the mean rate in the ten preceding corresponding quarters. The death-rates from violence ranged from 0·22 in Oxfordshire and 0·32 in Derbyshire, to 0·71 in Warwickshire and 0·84 in South Wales.

In the twenty-eight great towns the deaths from violence corresponded to an annual rate of 0·65 per 1000; the lowest rates in these towns were 0·35 in Derby, 0·40 in Sheffield, and 0·41 in Brighton; while the rates ranged upwards in the other towns to 0·91 in Liverpool, 0·92 in Manchester, and 1·09 in Huddersfield.

INQUESTS.—Inquests were held in 7134 cases, or in 5·5 per cent. of the total deaths, the mean proportion in the ten preceding fourth quarters was 5·4 per cent. In the twenty-eight great towns the proportion of inquest cases to total deaths was 6·7 per cent.; the percentage ranged from 3·1 and 3·4 in Sheffield and Preston, to 9·7 in Birmingham, 10·2 in Birkenhead, and 10·7 in Leicester.

DEATHS IN PUBLIC INSTITUTIONS.—The deaths registered in workhouses, hospitals, and public lunatic asylums numbered 13,386, equal to 10·3 per cent. of the total deaths; the mean proportion in the ten preceding corresponding quarters was 10·0 per cent. In the twenty-eight great towns 7298, or 15·9 per cent., of the deaths were recorded in these public institutions; the per-centage of institution deaths in these towns ranged from 6·6 and 7·0 in Plymouth and Bolton, to 17·1 in Brighton, 17·2 in Liverpool, 17·8 in Manchester, and 21·0 in London.

HEALTH OF COLONIAL AND FOREIGN CITIES.

A summary of the Weekly Returns, with which the Registrar-General is favoured by various local authorities abroad, shows that the average annual death-rate during the quarter ending with December last in thirty-one Colonial and Foreign cities, having an aggregate population of nearly sixteen millions of persons, was equal to 25·2 per 1000. In the twenty-two European cities the mean rate was 24·3 per 1000, against 20·3 in the twenty-eight large English towns. Among the thirty-one Colonial and Foreign cities the lowest death-rates were 17·8 in Baltimore, 18·9 in Stockholm, 20·4 in Brussels, 20·6 in Philadelphia, and 20·7 in Christiania; in the other towns the rates ranged upwards to 35·3 in Calcutta, 36·2 in Alexandria, 36·5 in Madras, 39·3 in Buda-Pesth, and 43·1 in Cairo. The rate of mortality in Paris was equal to 22·8 per 1000, and exceeded by 4·0 the rate recorded in London; the 12,733 deaths included 963 from diarrhoeal diseases, 333 from diphtheria and croup, 324 from measles, and 315 from typhoid fever. Small-pox caused 827 deaths in Buda-Pesth (against 174 and 327 in the two preceding quarters), 145 in

Rome, 50 in St. Petersburg, 25 in Vienna, and 19 in Paris. Measles caused 483 deaths in New York, 324 in Paris, and 100 in Berlin. The mortality from scarlet fever showed a decline in Paris and Hamburg, and 224 deaths were referred to this disease during the quarter in Buda-Pesth. The prevalence of diphtheria and croup showed a marked increase in most of the foreign cities; these diseases showed the highest proportional fatality in New York, Berlin, Hamburg, Prague, Dresden, and Christiania. The fatal cases of typhoid fever in Paris, which had been 160 and 279 in the two preceding quarters, further rose last quarter to 315, and were equal to an annual rate of 0.56 per 1000, while the death-rate from this disease in London did not exceed 0.21 per 1000. Cholera caused 795 deaths in Calcutta during the ten weeks ending December 11th; and 354 and 138 deaths from this disease during the quarter occurred in Buda-Pesth and Trieste respectively.

The Year 1886.

During the four quarters of 1886, 903,216 births and 537,078 deaths were registered in England and Wales. The *natural* increase of population during the year by excess of births over deaths was 366,138, showing a further decline from 375,922, and 371,520 in 1884 and 1885. The increase of population, estimated on the hypothesis that the rate of increase that prevailed during the last inter-censal period (1871-81) has been maintained since 1881, was 374,055, and 7917 more than the excess of births over deaths. According to returns issued by the Board of Trade, 236,104 British emigrants (of whom 149,005 were English, 25,688 Scotch, and 61,411 Irish), left the various ports of the United Kingdom, at which emigration officers are stationed, during the year. The amount of emigration from each division of the United Kingdom showed an increase upon that recorded in 1885; the increase was proportionally largest in Scotland.

The birth-rate in England and Wales in 1886 was 32.4, and the death-rate was 19.3 per 1000 of the estimated population in the middle of the year. The birth-rate was lower than in any previous year since 1848, when a similar rate was recorded, and was 2.0 below the mean annual rate in the ten years 1876-85. The death-rate which had been 18.9, 19.6, 19.5, 19.6, and 19.0 in the preceding five years, rose again last year to 19.3. The rates in those six years were all lower than that recorded in any previous year since civil registration began in 1837. The mean annual death-rate, in the first six years of the current decennium (1881-90) did not exceed 19.3, and was 2.1 below the mean rate in the preceding ten years 1871-80. This reduction in the death-rate implies that more than 339,000 persons in England and Wales were alive at the end of those six years whose deaths would have been recorded had the mean rate of mortality equalled that which prevailed throughout the ten years 1871-80.

The 537,078 deaths in 1886 included 135,084 of infants under one year of age, and 148,725 of persons aged upwards of 60 years. The rate of infant mortality, measured by the proportion of deaths under one year to registered births, was equal to 150 per 1000, against 147 and 138 in the two preceding years. The proportion of infant mortality, which averaged 149 per 1000 births in the ten years 1871-80, fell to 141 in the six years 1881-6. The rate of mortality during 1886 among persons aged upwards of 60 years was 72.3 per 1000 persons estimated to be living at those ages; in the three preceding years the death-rates at those ages were 69.6, 67.3, and 70.9 per 1000 respectively.

The deaths from all causes during the year included 23,462 from diarrhoea, 12,040 from whooping-cough, 11,576 from measles, 5859 from scarlet fever, 5831 from "fever" (typhus, enteric, and simple or ill-defined), 3807 from diphtheria, and 284 from small-pox. Thus 62,859 deaths were referred to the principal zymotic diseases, showing an increase of 5133 upon the low number returned in 1885; they were equal to a rate of 2.26 per 1000, against 2.20, 2.64, and 2.10 in the preceding three years 1883-4-5. The mean annual death-rate from these zymotic

diseases, which had been 3·96, 4·15, and 3·40 per 1000 respectively in the three decennial periods 1851-60, 1861-70, and 1871-80, did not exceed 2·43 in the first six years of the current decennium.

The deaths attributed to diarrhoea showed a considerable increase upon those returned in 1885; and those from "fever" were also rather more numerous, whereas the fatal cases of each of the other zymotic diseases showed a decline. The most noticeable feature of the zymotic mortality was the low death-rate from scarlet fever, which was 0·21 per 1000, and lower than the rate in any previous year of which record exists; the death-rate from this disease has steadily fallen year by year from 0·75 in 1878, and the mean rate in the last six years (1881-86) was 0·40, against 0·97 and 0·72 in the two decennia 1861-70 and 1871-80. The death-rate from "fever" in 1886 was 0·21 per 1000, corresponding with that in the previous year, which was the lowest on record; the mean death-rate from this cause in the first six years of the current decennium was 0·26, whereas in the three preceding decennial periods it was 0·91, 0·89, and 0·50 respectively. The deaths from small-pox (284) were considerably fewer than in any previous year of which record exists; the nearest approach to so low a number having been 536 in 1879.

During the year 28,690 inquest cases were registered, equal to 5·3 per cent. of the total deaths, which was almost identical with the mean per-centage in recent years.

The reported deaths from different forms of violence were 16,622, and exceeded the number in 1885 by 205; they were equal to 3·1 per cent. of the deaths from all causes, and to a rate of 0·60 per 1000 of the estimated population, against 0·62 and 0·60 in 1884 and 1885.

The foregoing statistics for 1886 are derived from a summary of the returns furnished to the Registrar-General by the local registrars at the close of each quarter of the year. The figures are therefore subject to revision when the causes of death and other details are finally classified and tabled for publication in the Registrar-General's Annual Report for 1886.

PRELIMINARY TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1876-86**, and in each Quarter of those Years.

YEARS -	1876	1877	1878	1879	1880	1881	1882	1883	1884	1885	1886
Marriages -	201,874	194,352	190,054	182,082	191,965	197,290	204,405	216,384	204,301	197,715	—
Births -	887,968	888,200	891,906	880,389	881,613	883,612	889,014	890,722	900,750	894,270	903,216

* Furnished by the Chief Cashier of the Bank of England.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which the best seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns with which the Registrar-General has been favoured by Mr. Richard Meade of the Mineral Statistics Department, Home Office.

482	Barrow-in-Furness - M	50,984†	446	173	34'7	13'5	1'09	126	{ Entire District.
	IX.—YORKSHIRE.								
510	Rotherham - M†	58,435	513	308	34'8	20'9	4'82	164	{ Rotherham and Kimberworth Sub-districts.
516	York - M†	75,281	546	361	28'8	19'0	3'11	137	{ Bootham, Micklegate, and Walm- gate Sub-districts.
534	Middlesbrough - M†	67,540	592	383	34'8	22'5	3'88	188	{ Middlesbrough Sub-district.
	X.—NORTHERN COUNTIES.								
542	Darlington - M†	44,006	324	192	29'2	17'3	2'61	173	{ Darlington Sub-district.
554	South Shields - M	122,069	1136	642	36'9	20'9	3'71	153	{ Entire District.
555	Gateshead - M†	76,448	636	353	33'0	18'3	2'75	156	{ Gateshead Sub-district.
557	Tynemouth - M†	49,758	416	236	33'2	18'8	1'50	149	{ Nth. Shields & Tynemouth Sub-dis- tricts.
572	Carlisle - M†	42,346	312	207	28'9	19'2	1'94	170	{ St. Cuthbert & St. Mary Sub-dis- tricts.
	XI.—MONMOUTHSH. & WALES.								
585	Newport (Monmouth) M†	36,277	305	252	43'2	27'6	3'94	248	{ Newport Sub-district.
587	Ystradgynodwg - L. G. D.†	52,919†	509	252	38'2	18'9	2'77	208	{ Ystradgynodwg Sub-dist. of Pontypridd.
588	Merthyr Tydfil - P	89,849	802	550	35'4	24'3	4'24	158	{ Lower and Upper Merthyr Tydfil & Aberdare Sub-districts.
592	Swansea - M	94,089	883	494	37'2	20'8	3'37	159	{ Llangafelach, Swansea, and Llan- samlet Sub-districts.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Imp† D. signifies an Improvement District, and L. G. D. a Local Government District.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion of addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situated outside that area.

‡ The rate of increase of population in Barrow-in-Furness and in Ystradgynodwg was so abnormally large between 1871 and 1881 as to preclude the probability of the rate being maintained between 1881 and 1891. The present population of these towns has therefore been estimated from

TABLE VIII.—LONDON—OUTER RING. **Population; Births; Deaths from All Causes, and from the principal Zymotic Diseases; and Annual Rate of Mortality; in the Fourth Quarter of 1886.**

Note.—In estimating the populations of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1881 has been the same as that which prevailed between 1871 and 1881; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London, and the estimates for its component districts have been adjusted to cast to the estimated total. In calculating the rates of mortality, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring; a similar correction has been made for the deaths registered in the Surrey County Lunatic Asylum situated in the District of Croydon.

TABLE IX.—Births and Deaths in the Fourth Quarter of 1886, in 31 Foreign Cities, having an estimated aggregate Population of 15,821,925 persons.

* The Registration or Union Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

‡ See page 14, note.

NOTE.—The Registrars alone must be considered responsible for the accuracy of the figures shown in their Returns, and for the opinions expressed in the foot notes.

REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND.
INFANTS under one year of Age, and of PERSONS aged 60 years and upwards from
WHOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE, also INQUEST CASES and
the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and
of ENGLAND.

a The Superintendent Registrars' Districts, 632 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

b These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Census Report of 1881. They do not include spaces occupied by foreshore or tidal water of rivers and creeks. c See page 14, note b.

II.—SOUTH EASTERN COUNTIES.—SUPERINTENDENT REGISTRARS' DISTRICTS.—continued.

										The DEATHS in the Quarter are stated by the Registrars to include									
Superintendent Registrars' Districts.		Area in Statute Acres.	Enumerated Population, 1881.	Marriages Registered in Quarter ending 30 Sept. 1886.	Births Registered in Quarter ending 31 Dec. 1886.	Deaths Registered in Quarter ending 31 Dec. 1886.	Deaths from												
							Deaths of Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Institutions.

^a The Registration Sub-districts (2143 in number) are sub-divisions of the Superintendent Registrars' Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

^b For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 1st January 1887.

a 624: 1.—Of the 5 deaths from whooping-cough, 4 occurred in the parish of Llanegryn.

b 625: 2.—The 7 deaths from scarlet fever and 9 of the deaths from whooping-cough occurred in Festiniog Urban Sanitary District.

c 625: 3.—Of the 7 deaths from whooping-cough, 5 occurred in Ynysyghair Urban Sanitary District.

d 630a: 3.—The Registrar reports that several cases of typhoid fever have occurred in the parish of Llanfellech.

METEOROLOGY OF ENGLAND.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING DECEMBER 31ST, 1886.

By JAMES GLAISHER, Esq., F.R.S., &c.

The weather in October during the first twelve days and from the 19th was warm, particularly during the first week, the temperature at the Royal Observatory, Greenwich, rising to $79^{\circ} \cdot 2$ on the 4th, a point higher than in any October back to 1859, when it was $81^{\circ} \cdot 1$, and to 77° on the 5th; the mean temperature of the 4th and 5th days was more than 10° above the average. The month was warmer than any October back to 1861. The fall of rain was above its average at most stations. The atmospheric pressure was above its average till the 8th and from the 21st, and below from the 9th to the 20th, particularly so on the 15th, 16th, and 17th days.

The weather in November was generally unsettled, the temperature was variable, being for a few days together above the average, and then for a few days together below; the atmospheric pressure was generally below its average till the 17th, and generally above from the 18th. The fall of rain was generally less than the average; about London it was a little in excess of average, it fell frequently till the 20th day. The wind was mostly from the S.W.; the latter part of the month was cloudy, foggy, and dull.

The weather in December was for the most part dull and cold, and very exceptional, the temperature in the first week was very low, on the 2nd day it was more than 10° degree below its average, and on the 3rd day was nearly 14° below its average; from the 6th to the 15th it was mostly mild, and very cold from the 16th to the end of the month, particularly so on the 18th, 19th, 20th, and 21st, the mean temperature of these four days was 27° or $12^{\circ} \cdot 30$ below their average. The atmospheric pressure was very remarkable, till the 5th day it was a little in excess of its average, and then nearly constantly below till the 29th day, and particularly so on the 8th and 9th, whose average daily pressure was nearly $1 \cdot 4$ inch below their averages. The low readings of the barometer on the 8th and 9th were very extraordinary, at Blackheath on the 8th the reading was nearly stationary from 8 p.m. to near midnight at $28 \cdot 157$ ins., it then rose to $28 \cdot 16$ ins. by 2 a.m. on the 9th and then decreased to $28 \cdot 14$ ins. by 7 a.m., a point lower than any reading since 1843 on January 13th, when it was $28 \cdot 096$ ins. The minimum readings occurred at western stations before eastern, and at northern before southern:—

At Bath the minimum reading was	$27 \cdot 777$ ins.	at	6 p.m.	on the 8th.
At Llandudno	"	"	$27 \cdot 720$	" at 6.30 "
At Carlisle	"	"	$27 \cdot 464$	" at 8.0 "
At Bradford	"	"	$27 \cdot 456$	" at 8.40 "
At Rugby	"	"	$27 \cdot 950$	" at 10.0 "
At Lowestoft	"	"	$28 \cdot 100$	" at 10.50 "
At Cambridge	"	"	$28 \cdot 170$	" at 11.30 "

These low readings, so far as I know, are unprecedented; for previous instances of such low readings at Greenwich see my note *Greenwich Magnetical and Meteorological Observations*, 1843, (page 266), they are 1783 March 6, the readings being $28 \cdot 22$ ins., 1809 on December 17th, when it was $28 \cdot 20$ ins., and 1821 on December 25th, when it was $27 \cdot 89$ ins. Rain fell on five days out of six at southern stations, and was above its average at all stations; on the 26th rain fell at Blackheath to the depth of $0 \cdot 24$ in. by 5 p.m., after this snow began to fall, and was 8 ins. in depth at 10 p.m., it continued to fall till 2 or 3 o'clock on the 27th, and at 8 a.m. on level places there was snow to the depth of 12 ins., and which produced very nearly $1 \frac{3}{4}$ ins. of water; this was the most dense snow I have known, usually one foot of fresh fallen snow produces one inch of water, the density of this snow caused great injury to telegraph poles, and breaking off many branches of trees.

About London the mean daily temperature of the air was above its average till the 12th day, the mean daily excess being $4^{\circ} \cdot 3$; the six days ending October 18th were a little below their average; then from October 19th to November 5th the period was warm, the mean excess of daily temperature being $2^{\circ} \cdot 5$; from November 6th to 10th there was a mean daily deficiency of temperature of $2^{\circ} \cdot 6$, the weather was moderately warm from November 11th to November 21st, the excess of mean daily temperature was $2^{\circ} \cdot 5$; a cold period then set in and extended to December 5th, and particularly so on December 2nd and 3rd, the departures below the average of these days were $10^{\circ} \cdot 6$ and $13^{\circ} \cdot 8$, the mean deficiency for the 14 days ending December 5th was $4^{\circ} \cdot 1$. It was moderately warm from December 6th to December 15th, the mean excess of daily temperature was $2^{\circ} \cdot 5$, and from this time to the end of the month it was cold, and at times very cold, particularly so from the 16th to the 21st, the average deficiency of these six days was 11° daily, and for the 16 days ending December 31st was $5^{\circ} \cdot 3$.

The mean temperature of the air for October was $53^{\circ} \cdot 3$, being $3^{\circ} \cdot 8$ and $3^{\circ} \cdot 4$ above the averages of 115 years and 45 years respectively; it was $7^{\circ} \cdot 2$ higher than in 1885, $4^{\circ} \cdot 4$ higher than in 1884, and $2^{\circ} \cdot 9$ higher than in 1883, and warmer than any October back to 1861, when it was $54^{\circ} \cdot 9$; back to 1772 there have been but six instances of October so warm as this.

1795 when it was	$53^{\circ} \cdot 4$	1831 when it was	$55^{\circ} \cdot 0$
1811 " "	$55^{\circ} \cdot 5$	1861 " "	$54^{\circ} \cdot 9$
1818 " "	$53^{\circ} \cdot 7$		

The mean temperature of November was 44° , being higher than in 1885 by $0^{\circ} \cdot 7$, in 1884 by $1^{\circ} \cdot 6$, and in 1883 by $0^{\circ} \cdot 2$.

NOTE.—In reading this table it will be borne in mind that the plus sign (+) signifies above the average, and the minus sign (−) signifies below the average.

Average duration of the different directions of the wind referred to eight points of the compass, and duration in days of each direction in each month in the quarter, were as follows:—

Direction of Wind.	OCTOBER.			NOVEMBER.			DECEMBER.		
	1886.	Average.	Departure from Average.	1886.	Average.	Departure from Average.	1886.	Average.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.
N.W.	1	2½	- 1½	5	2½	+ 2½	7	2½	+ 4½
N.	1	3½	- 2½	4	4½	+ 3½	2	3	+ 1
N.E.	4	3	+ 1	5½	4	+ 1½	3	2½	+ ½
E.	2	1½	+ ½	1	2½	- 1½	0	2	- 2
S.E.	8	2	+ 6	2	2½	- ½	3	2	+ 1
S.	2	4	- 2	1½	4	- 2½	3	3½	- ½
S.W.	12	10	+ 2	13	8½	+ 4½	9	11	- 2
W.	1	4½	- 3½	1½	2½	- ½	4	4½	- ½

The sign (+) denotes excesses over averages; the numbers affected by this sign in October are opposite to S.E. and S.W.; in November to S.W. and N.W.; and in December to N.W.

The sign (−) denotes deficiencies below averages. In October this sign is opposite to W. and compounds of the W.; in November opposite to S. and compounds of the S.; and in December opposite to E. and S. and its compounds.

The mean temperature of December was 36°·5, being lower than in 1885 by 2°·4, in 1884 by 4°·5, and in 1883 by 4°·0, and colder than any December since the year 1879, when it was 32°·4.

The mean temperature of the quarter was 44°·6, being 0°·9 and 0°·5 higher than the average of 115 years and 45 years respectively.

The mean high day temperature of the air in October was 60°·5, being 2°·6 above the average of 45 years; in November was 49°·5, being 0°·7 higher than the average of 45 years, and in December was 41°·4, being 3°·3 below the average of 45 years.

The mean low night temperature of the air in October was 47°·1, being 3°·6 above the average of 45 years; in November was 38°·0, being 0°·7 above the average of 45 years; and in December was 31°·2, being 4°·0 below the average of 45 years.

Therefore the days and nights were warm in the months of October and November, and very cold in December.

The mean daily range of temperature in October was 13°·4, being 1°·1 smaller than the average; in November was 11°·5, being the same as the average, and in December was 10°·2, being 0°·9 greater than the average.

The mean temperature of the air in October was 5°·4 lower than in September; in November it was 9°·3 lower than in October; and in December it was 7°·5 lower than in November.

(From the preceding 45 years' observations the decrease of temperature from September to October is $7^{\circ} \cdot 8$; the decrease from October to November is $6^{\circ} \cdot 4$, and the decrease from November to December is $4^{\circ} \cdot 7$.)

From September to October there was a mean decrease of $4^{\circ} \cdot 7$ at stations south of 53° , and of about 4° at more northern stations.

From October to November there was a mean decrease of 8° at all stations.

From November to December the mean decrease was about $7^{\frac{1}{2}}^{\circ}$ from all stations.

The mean reading of the barometer at the height of 159 ft. above the level of the sea for the month of October was $29 \cdot 618$ ins., being $0 \cdot 092$ in. below the average of 45 years, $0 \cdot 088$ in. higher than in 1885, $0 \cdot 277$ in. lower than in 1884, and $0 \cdot 182$ in. lower than in 1883.

The mean reading of the barometer for the month of November was $29 \cdot 732$ ins., being $0 \cdot 011$ in. higher than in 1885, $0 \cdot 246$ in. lower than in 1884, and $0 \cdot 073$ in. higher than in 1883.

The mean reading of the barometer in December was $29 \cdot 522$ ins., being lower than in any December since that of 1872, it was lower than in 1885 by $0 \cdot 509$ in., than in 1884 by $0 \cdot 168$ in., and by $0 \cdot 461$ in. in 1883.

The ranges of readings of the barometer in December were remarkable; they increased gradually from $1 \cdot 8$ in. at Guernsey to $2 \cdot 9$ in. at Carlisle.

From September to October there was a decrease of atmospheric pressure at stations south of 53° of $0 \cdot 25$ in., and of $0 \cdot 20$ in. at stations north of this parallel.

From October to November there was an increase of pressure at stations south of 51° of $0 \cdot 18$ in., between 51° and 52° of $0 \cdot 13$ in., between 52° and 53° of $0 \cdot 10$ in., and north of this parallel of $0 \cdot 07$ in.

From November to December there was a decrease of pressure at stations south of 51° of $0 \cdot 19$ in., between 51° and 52° of $0 \cdot 21$ in., and north of 52° of $0 \cdot 24$ in.

About London the barometric pressure differed but little from its average during the first week of October; from October 9th to the 20th it was low, and particularly so on the 16th, when it was more than an inch below its average, and it was more than $\frac{3}{4}$ ths in. below both on the 17th and 19th; the average daily deficiency for the 12 days ending October 20th was $0 \cdot 42$ in.; from October 21st to November 3rd it was high, the average excess of daily pressure was $0 \cdot 24$ in. From November 4th to November 17th the barometer reading was constantly low, the average daily deficiency of pressure was $0 \cdot 45$ in. The readings were constantly high from November 18th to November 28th, the average daily excess of pressure was $0 \cdot 56$ in.; then till December 5th it was alternately a little above and then a little below its average. On December 6th to December 29th, with the exception of December 20th and 21st, which were slightly in excess, the barometer readings were remarkably low, particularly on December 8th and December 9th, when the daily deficiency was $1 \cdot 4$ in. on both days; the average daily deficiency of pressure for the 24 days ending December 29th was $0 \cdot 41$ in. The readings on the last two days were in excess to the mean value of $0 \cdot 38$ in.

Thunderstorms occurred in October, on the 1st at Guernsey, Ventnor, Osborne, Southbourne, Salisbury, Whitechurch, Oxford, and Leicester; on the 4th at Torquay; on the 6th at Hull; on the 7th at Nottingham; on the 10th at Ventnor, Leicester, Liverpool, Halifax, and Leeds; on the 13th at Guernsey; on the 17th at Nottingham and Liverpool; on the 19th at Torquay, Ventnor, Eastbourne, Osborne, Bath, Oxford, and Nottingham; on the 20th at Ventnor, Osborne, Salisbury, Whitechurch, Oxford, Royston, Cambridge, Leicester, Nottingham, Halifax, and Bradford.

In November, on the 6th at Osborne.

In December, on the 8th at Salisbury, Whitechurch, Oxford, Rugby, Llandudno, Liverpool, and Hull; on the 9th at Ventnor, on the 11th at Guernsey; on the 15th at Plymouth; on the 18th at Liverpool; and on the 28th at Torquay.

Thunder was heard but lightning was not seen in October, on the 1st at Torquay and Cambridge; on the 5th, 6th, and 7th at Carlisle; on the 10th at Rugby, Wolverhampton, and Stonyhurst; on the 19th at Halifax; on the 20th at Eastbourne and Rugby; and on the 30th at Osborne.

In December, on the 8th at Bath, Somerleyton, and Stonyhurst; and on the 14th at Bath.

Lightning was seen but thunder was not heard in October, on the 1st at Whitechurch, Blackheath, Royston, Cambridge, and Rugby; on the 2nd at Camden Square; on the 4th at Torquay; on the 7th at Halifax; on the 8th at Blackheath and the Royal Observatory; on the 13th at Lowestoft; on the 14th at Cambridge and Lowestoft; on the 19th at Guernsey, Torquay, Salisbury, Whitechurch, Blackheath, and the Royal Observatory; on the 20th at Whitechurch, Blackheath, the Royal Observatory, and Lowestoft; on the 21st at Stonyhurst; and on the 29th at Plymouth.

In November, on the 9th at Guernsey.

In December, on the 1st at Halifax; on the 7th at Bath; on the 8th at Guernsey, Torquay, Ventnor, Blackheath, and Lowestoft; on the 9th at Liverpool; on the 16th at Guernsey and Torquay; on the 18th at Halifax and Stonyhurst; on the 19th at Whitechurch and Liverpool; on the 20th at Lowestoft; on the 28th at Guernsey, Torquay, Salisbury, and Blackheath.

Solar halos were seen in October, on the 1st at Oxford; on the 3rd at Blackheath, Oxford, and Halifax; on the 4th at Oxford; on the 7th at Torquay; on the 11th at Torquay and Blackheath; on the 13th at Halifax; on the 14th at Torquay and Halifax; on the 18th at Torquay; on the 20th at Oxford; on the 22nd at Torquay and Oxford.

In November, on the 9th at Torquay; on the 20th at Torquay and Blackheath.

In December, on the 3rd, 15th, 25th, and 28th at Torquay.

Year 1886.	Height of Station above Sea Level.	Names of Stations and Observers.	Pressure of Atmosphere in Month.		Temperature of Air in Month.			Mean Tem- perature.		Vapour.			Mean Degree of Humi- dity, Sat. = 100.		Mean Reading of Thermometer.		Wind.			Mean Amount of Ozone.		Mean Amount of Cloud.		Rain.

[Continued from page 67.]

Lunar halos were seen in October on five nights; in November on five nights; and in December on ten nights.

Snow fell in November, on the 6th at Bradford; and on the 30th at Halifax and Carlisle. In December, on the 1st at Royston and in the Midland and Northern Counties; on the 2nd at Plymouth, Torquay, Blackheath, Royston, Cambridge, Lowestoft, Somerleyton, Llandudno, and Liverpool; on the 3rd at Guernsey, Somerleyton, Llandudno, Hull, and Bradford; on the 4th at Cambridge and Burslem; on the 6th at Wolverhampton; on the 7th at Wolverhampton, Halifax, Bradford, and Carlisle; on the 8th at Torquay and in the Northern Counties; on the 9th at Torquay; on the 10th at Torquay, Whitechurch, Blackheath, Oxford, and Burslem; on the 14th at Wolverhampton, Burslem, Liverpool, Halifax, Hull, and Bradford; on the 15th at Rugby and in the Northern Counties; on the 17th at Torquay, Whitechurch, and Blackheath; on the 18th at Truro and the Northern Counties; on the 19th at Truro and in the Northern Counties; on the 20th at Guernsey, Royston, Cardington, Cambridge, and Hull; on the 21st at Llandudno; on the 24th at Leicester; on the 25th at Leicester, Halifax, and Bradford; on the 26th at Torquay, Ventnor, Osborne, Southbourne, Salisbury, and generally at stations south of latitude 53°; on the 27th at Whitechurch, Camden Square, Cambridge, Lowestoft, Leicester, and Carlisle; on the 28th at Leicester and Halifax; on the 29th at Cambridge and Leicester.

Hail fell in October, on the 2nd at Barnet; on the 13th at Torquay, Ventnor, and Stonyhurst; on the 14th at Royston and Cambridge; on the 17th at Plymouth; on the 20th at Whitechurch, Oxford, and Cambridge; and on the 23rd at Torquay.

In November, on the 4th at Guernsey and Truro; on the 6th at Guernsey, Truro, and Osborne; on the 9th at Guernsey, Lowestoft, and Hull; on the 10th at Liverpool; on the 28th at Carlisle; on the 29th at Guernsey, Stonyhurst, and Carlisle; on the 30th at Guernsey and Stonyhurst.

In December on 21 different days at the different stations.

Fog prevailed in October, on the 1st at Torquay and Barnet; on the 3rd at Torquay, Bath, Whitechurch, and Barnet; on the 4th at Bath, Whitechurch, Oxford, and Wolverhampton; on the 5th at Whitechurch, Barnet, Oxford, Cambridge, and Bradford; on the 7th at Barnet; on the 8th at Ventnor, Bath, Whitechurch, Blackheath, Barnet, Cambridge, and Llandudno; on the 9th at Eastbourne and in the Southern and Midland Counties; on the 18th at Bath; on the 21st at Blackheath, the Royal Observatory, and Cambridge; on the 22nd at Bath; on the 23rd at Blackheath and Bradford; on the 24th at Whitechurch, Oxford, and Stonyhurst; on the 25th at Whitechurch, Bradford, and Carlisle; on the 26th at Bath and Bradford; on the 27th at Whitechurch, Bradford, and Carlisle; on the 28th at Bath; on the 29th at Torquay, and Wolverhampton; on the 30th at Whitechurch and Barnet; on the 31st at Torquay, Bath, Whitechurch, Barnet, Oxford, and Bradford; on the 31st at Guernsey, Ventnor, and Barnet.

In November, on the 1st at Ventnor; on the 2nd at Cambridge; on the 3rd at Bradford; on the 7th at Leicester; on the 11th at Bath; on the 13th at Plymouth; on the 14th at Torquay; on the 15th at Ventnor, Oxford, Leicester, Hull, and Bradford; on the 17th at Salisbury, Oxford, and Royston; on the 22nd at Bath and in the Midland and Northern Counties; on the 23rd at Plymouth, Bath, and in the Midland Counties; on the 24th, 25th, and 26th at Plymouth and in the Midland and Northern Counties; on the 27th at Bath, Cardington, Cambridge, Rugby, Somerleyton, Leicester, Hull, and Stonyhurst; on the 28th at Salisbury and in the Midland Counties. In December, on the 4th at Torquay, Salisbury, and Bradford; on the 5th at Bath; on the 7th at Oxford; on the 11th at Bradford; on the 13th at Somerleyton and Liverpool; on the 15th at Bath; on the 16th at Bath and Burslem; on the 17th at Ventnor and in the Midland Counties; on the 19th at Blackheath and Oxford; on the 20th at Bath and in the Midland Counties; on the 21st at Guernsey and in the Midland and Northern Counties; on the 22nd at Salisbury; on the 23rd at Plymouth and Cardington; on the 25th at Plymouth; on the 26th at Salisbury and Whitechurch; on the 30th at Salisbury, Bath, Oxford, Royston, Wolverhampton, and Leicester; on the 31st at Salisbury and in the Midland and Northern Counties.

The highest temperatures of the air were at Rugby, 82° 0; at Cambridge, 79° 5; and at Royal Observatory, 78° 2.

The lowest temperatures of the air were at Carlisle, 42° 2; at Stonyhurst, 12° 3; and at Halifax, 13° 0.

The greatest ranges of temperature were at Carlisle, 65° 3; at Barnet, 61° 1; and at Cambridge, 62° 5.

The least ranges of temperature were at Guernsey, 38° 0; at Torquay, 40° 0; and at Leeds, 43° 0.

The greatest number of days of rain were at Guernsey, 78; at Nottingham, 74; and at Salisbury, 72.

The least number of days of rain were at Blackheath, 45; at Somerleyton, 46; and at Greenwich and Whitechurch, 47.

The greatest falls of rain were at Barnstable, 19.67 inches; at Bath, 19.27 inches; and at Guernsey, 18.31 inches.

The least falls of rain were at Royal Observatory, 8.03 inches; at Blackheath, 8.38 inches; and at Lowestoft, 8.47 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

PARALLELS OF LATITUDE, &c.		Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Read- ings of the Thermometer.	Mean of all Lowest Read- ings of the Thermometer.	Mean Range of Tempera- ture in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Max- imum in Rays of Sun.	Mean Reading of Min- imum on Grass.	Mean Estimated Strength.	WIND.				Mean Amount of Ozone.	Mean Number of Days it fell.	Rain.
